

INTRODUCTION

GENERAL

1. The first system ordered by a new volume customer and all end user systems must include complete peripheral subsystems except for the teletype controllers. That is, a device must be ordered with each peripheral controller. By ordering a fully integrated system, the customer is assured of a fast, efficient start-up on his new equipment.
2. This price list is intended for use with all current INTERDATA products. For expansions to earlier models, refer to the nearest INTERDATA Sales Office.
3. Price List Organization —The hardware portion of the Price List is divided into major product areas, as indicated in the index. Within the price list there are a number of columns, as outlines below.

PRODUCT NUMBER, DESCRIPTION, PREREQUISITES

This column identifies, from a packaging or integration standpoint, the prerequisites to support the item in a system. If the item is ordered as an expansion, the original configuration must be reviewed to ensure that the item can be supported.

LIST PRICE

The list price is shown for each item. If the item is fully discountable under INTERDATA's standard Discount Agreement, the list price is shown by itself. If the item is partially discountable (or non-discountable) the non-discountable portion is shown in parenthesis below the list price. All items shown with a discount are type A discounts unless otherwise noted. Refer to agreement for discount information.

PROCESSOR DISCOUNTS

All processors (CPU with memory, chassis and power supply) of the same number of bits, e.g., 5/16 (except for board sets) 6/16, 8/16, 7/32, 8/32 etcetera, are mix and match for unit discount determination.

EXAMPLE: 6-6/16's and 7-8/16's would be discounted at the 13 quantity level.

MONTHLY SERVICE RATES

Charges for standard first shift coverage Monday through Friday. For additional coverage contact customer service.

FIELD INSTALLATION

Fixed price installation charges per item. Optional for customers not receiving installation under their terms of purchase. Subject to minimums per Section VIII Customer Service Support.

- A. For each System purchased hereunder, INTERDATA shall install the System (operationally check out the equipment) at the Buyer's location, using standard INTERDATA test procedures, provided that each of the following conditions are met:
 - Site is made ready by Buyer for installation and System is available for testing by INTERDATA within thirty (30) days of delivery from INTERDATA.
 - Repair of any and all damages occurring subsequent to shipment from INTERDATA (including those during transportation) is first performed at standard Field Service rates; and
 - INTERDATA is reimbursed for all travel and subsistence expenses to installation sites greater than 200 miles from the nearest INTERDATA Field Service location.
- B. Installation of add-on or expansion equipment is available in accordance with the terms and prices set forth in the then-current INTERDATA price list.

CARD SLOTS

For Processors and chassis, this column shows the number of available card slots (in parenthesis). For device controllers and other modules, the number indicates the type and card and the space occupied, as illustrated below:

0.5 7" x 15" board utilizing one half slot in a processor chassis or M49-020 expansion chassis

1.0 15" x 15" board utilizing, one slot in a processor chassis or M49-020 expansion chassis

IC 10" x 10" board utilizing, with a M49-003 10"/15" adapter, one slot in a processor or M49-020 expansion chassis

1W 10" x 10" wirewrapped board, utilizing, with a M49-003 10"/15" adapter, two slots in a processor or M49-020 expansion chassis

MOUNTING UNITS

Vertical mounting dimensions are given in terms of mounting units, where one unit is 1.75", a RETMA standard dimension. This information should be used when configuring a system in a system cabinet (M49-040).

+5V, +16V, -16V

This information enables a power balance to be performed to assure adequate power. Note that for all Models the processor power supply cannot be used for the expansion chassis.

4. Factory testing as a module only, is provided for any controller or interface purchased without its accompanying peripheral. No field testing will be performed.
5. Abbreviations:
 - HOQ — Home Office Quote
 - CSQ — Customer Service Quote
 - NC — No Charge

The prices listed herein do not constitute an offer to sell which is only made in accordance with a valid quotation by an authorized representative of Interdata.

Prices herein may be changed by addenda issued hereto and all errors are subject to correction at any time.

Prices quoted are effective August 1977 FOB Oceanport, New Jersey and apply in the Continental United States.

Federal, state, local taxes or other fees are not included in the listed prices.

This Price List is applicable for Domestic US Sales only.

All purchase orders specifying expedited delivery are not subject to discounts.

FIELD INSTALLATION FIXED PRICE

The charges for field installation of a system or expansion shall be the sum of the installation prices plus a one-time travel charge from the nearest INTERDATA service office. A minimum installation charge of \$200 plus the travel charge is applicable. Installation consists of functional, operational testing and system performance as demonstrated by applicable INTERDATA test programs. This service is available for items purchased directly from INTERDATA and must be ordered prior to shipment of the equipment.

Travel Charges are as follows:

Distance from Service Center	Travel Charge
0-20 Miles	No Charge
21-100 Miles	\$ 50
101-300 Miles	\$150
301-500 Miles	\$250

PROCESSORS								
MODEL 5/16 GENERAL PURPOSE PROCESSOR								
Includes 16 General Purpose Registers, Buffered Multiplexor Bus, Micro I/O Bus for programmed or DMA transfers and Automatic Vectored Interrupt. The 5/16 Central Processors have a full memory cycle time of 600 nano seconds. The 5/16 includes List Instructions, Signed Multiply/Divide Instructions, ROM support for ASCII Programmer console, Real Time Clock Input and Processor Self Test.								
M51-000	Model 5/16 Processor with 8192 Bytes of 600ns MOS RAM.*	-	1	-	-	-	-	-
M51-001	Model 5/16 Processor with 16,384 Bytes of 600ns MOS RAM.*	-	1	-	-	-	-	-
M51-002	Model 5/16 Processor with 24,576 Bytes of 600ns MOS RAM.*	-	2	-	-	-	-	-
M51-003	Model 5/16 Processor with 32,768 Bytes of 600ns MOS RAM.*	-	2	-	-	-	-	-
M51-004	Model 5/16 Processor with 40,960 Bytes of 600ns MOS RAM.*	-	2	-	-	-	-	-
M51-005	Model 5/16 Processor with 49,152 Bytes of 600ns MOS, RAM.*	-	2	-	-	-	-	-

M81-108	Combination display controller and 8/16 Automatic Load option.	8/16 CPU	.5	-	0.51	-	-	-
M81-109	OS/16 MT2 Automatic Load Program. Preprogrammed ROM module for leading of OS/16MT2 from 2.5. 10 or 40 megabyte disc.	M81-107 or M81-108	-	-	0.30	-	-	-
M81-110	1024 Bytes of Read-only-memory for use with 8/16 automatic Load option. Chip will be fused to customers supplied program.	M81-107 or M81-108	-	-	0.35	-	-	-
M81-111	Processor Parity Control. Generates and checks memory parity for 8/16 processor.	8/16 CPU	-	-	0.5	-	-	-
M81-112	Hardware Signed Fixed Point Multiply/Divide. Multiplies two signed 16 bit numbers to produce a 32 bit product. Divides a 32 bit dividend by a 16 bit divisor.	8/16 CPU	.5	0.75	-	-	-	-
M81-100	Single precision hardware floating point option. Provides a complete set of 32 bit floating point instructions plus eight 32 bit floating point registers.	8/16 CPU and M81-112	2	-	0.8	-	-	-
M81-101	Single/Double precision hardware floating point option. Provides a complete set 32 bit and 64 bit floating point instructions plus eight 32 bit floating point registers and eight 64 bit - Floating Point Registers.	8/16 CPU and M81-112	2	-	0.8	-	-	-
M70-103	Selector channel. Provides true cycle stealing access to memory for 8 or 16 bit transfers at a rate up to 2.66 megabyte/sec. Includes all addressing, word count, and byte level assembly/disassembly hardware.	8/16 CPU	1	-	2.3	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
PROCESSORS (CONTINUED)								
MODEL 7/32 CII GENERAL PURPOSE PROCESSORS								
An enhanced 32 bit processor capable of directly addressing one megabyte of main memory. Includes 32, 32 bit General Purpose Registers, High Speed Multiply/Divide, DMA Connection, Privileged instruction detect, 1024 Hardware Vectored Interrupt Levels and up to 1024 Automatic Driver Channels. Included in the 7/32/CII is a new instruction. Load Real Address (LRA) which significantly improves operating system performance. The 7/32 processors also support the new High Speed Data Handling option M73-112. They do not support half word mode.								
M73-042	Model 7/32C-II Processor with 65,536 bytes of 750nsec core memory, a 16-slot chassis, and 50 Amp power supply. Supports both the M73-114 single precision and M73-115 single and double precision floating point processors.	-	(11)	8	(20)	(2)	(2)	115/230VAC 47-63 Hz 6.0/3.5 Amps Max.
M73-043	Same as M73-042, except with 128KB of 750nsec memory, and with MAC (M73-104).	-	(10)	8	(15)	(2)	(2)	115/230 VAC 47-63 Hz 6.0/3.5 Amps Max.

MODEL 7/32 CII PROCESSOR MEMORIES								
M73-300	32,768 Byte Memory Expansion Module. 750 ns Core Cycle Time. (Note 1)	7/32 CII	1.0	-	3.3	0.2	0.2	-
M73-301	32,768 Byte Memory Expansion Module with Parity 750 ns Core Cycle Time. (Note 1)	7/32 CII	1.0	-	3.3	0.2	0.2	-
M73-310	65,536 Byte Memory Expansion Module. 750 ns Core Cycle Time.	7/32 CII	00	1.0	-	3.3	0.2	-
M73-311	65,536 Byte Memory Expansion Module with Parity. 750 ns	7/32 CII	1.0	-	3.3	0.2	0.2	-

(Note 1) For Processors Delivered before June 1, 1976, order the following expansion numbers:
M73-306 32,768 Byte Memory Expansion Module. 750ns.
M73-307 32,768 Byte Memory Expansion with Parity. 750ns

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
PROCESSORS (CONTINUED)								
MODEL 7/32 CII PROCESSOR OPTIONS								
M71-101	Binary Display Panel. Includes long life, Light Emitting Diode (LED) binary readout and Hexadecimal Input Keyboard. Includes key operated on/off/lockout switch.	7/32 CII	-	3	4.2	-	-	-
M71-102	Hexadecimal Display Panel. Includes an advanced Hexadecimal Light Emitting Diode (LED) readout and Hexadecimal Input Keyboard. Includes key operated on/off/lockout switch.	7/32 CII	-	3	5.8	-	-	-
M73-100	Power Fail Detection/Auto Restart for Model 7/32.	7/32 CII	-	-	-	-	-	-
M73-103	DMA Buffer. Generates a high quality, high speed 7 channel Direct Memory Access Bus. One required per CPU with Direct Memory Access connections.	7/32 CII	1.0	-	4.0	-	-	-
M73-104	Memory Access and Protect Controller. Provides for programmable write and execute protection of main memory. In addition provides for dynamic segmentation and relocation of user programs. Also includes an M73-103 DMA Buffer.	7/32 CII	1.0	-	5.0	-	-	-
M73-105	Extended Memory Selector Channel. Provides a true cycle stealing access to up to 1,000,000 bytes of main memory for 8 or 16 bit transfers at rates up to 2 million bytes/sec. Accommodates up to 16 device controllers.	M73-103 or M73-104	1.0	-	5.5	-	-	-
M73-106	Local Memory Bank Interface. Provides capability to extend the memory bus to handle over 256K bytes of memory (8 modules). Must be added after each additional 256K bytes of memory (8 modules). Also can be used for dual processor shared memory configurations.	M73-103 or M73-104 & M73-111	1.0	-	3.5	-	-	-
M73-107	Processor Parity Control. Generates and checks parity. Includes parity upgrade and check on first memory module.	7/32 CII	-	-	-	-	-	-
M73-111	Local Memory Bank Interface Chassis. Provides for memory expansion of up to 256K Bytes of memory (8 modules) plus space for Local Memory Bank Interfaces, Extended Selector Channels or I/O controllers.	7/32 CII & M49-050	(16)	8	-	-	-	-
M73-112	High Speed Data Handling Option. Provides three additional instructions which process special communication characters, permit memory to memory data moves and perform simultaneous translation and error checking of both LRC and CRC as used by Bisync and SDLC protocols.	7/32 CII	.5	-	.7	-	-	-
M49-032	50 Amp VDE Power Supply — In place of standard 7/32 50 AMP supply.	7/32 CII	-	-	-	-	-	115/230 VAC 47-63 Hz 6.3 Amps. Max.
M73-115	High performance floating point. Includes 34 floating point instructions plus 8 32-bit single precision and 8 64-bit double precision floating point registers.	7/32 CII	2	-	15	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
PROCESSORS (CONTINUED)								
MODEL 8/32 GENERAL PURPOSE PROCESSOR								
A high performance 32 bit fully parallel processor capable of Directly Addressing 1,048,576 bytes of Main Memory. The CPU features instruction lookahead stacks and interleaved memory to yield an effective 32 bit cycle time of 300 ns. The Processor includes two sets of sixteen General Purpose Registers each 32 bits wide, 1024 hardware interrupt levels, 16 slot chassis, levels, 16 slot chassis, system cabinet, two power supplies, Binary Display Panel, Power Fail Detection/Automatic Restart, privilege instruction detect, and up to 1024 Automatic Driver Channels. Includes Memory Access and Protect Controller. Provides for program protection (execute, write, write/interrupt, limit and non-present protection) and program segmentation and relocation. Includes sixteen 32 bit segmentation registers. A current loop interface to a teletypewriter is also included.								
M83-025	Model 8/32C Processor with 131,072 Bytes of 750 ns Core Memory and provision for using M83-111 High Performance Floating Point and M83-103 High-Speed Data Handling Options.	-	-	8	(9)	-	-	115/230 VAC 47-63 Hz 13/6.50 Amps. Max.
M83-030	Model 8/32D Processor with 262,144 bytes of 750 ns Core Memory, and provision for using M83-111 High Performance Floating Point, and M83-103 High Speed Data Handling Options.	-	-	8	-	8.9	9.7	115/230 VAC 47-63 Hz 13/6.50 Amps. Max.
NOTE: The addition of Writable Control Store and/or High Performance to either a base machine (minimum memory) or megabyte machine, requires the purchase of one M49-050 Power Supply.								
8/32 C MEMORIES								
M83-310	Memory Expansion from 131,072 bytes to 262,149 Bytes.	8/32C	-	8	-	-	-	115/230 VAC 47-63 Hz 6.5/3.25 Amps Max.
M83-311	Same as above with parity.	8/32C and M83-107	-	8	-	-	-	
M83-312	Memory Expansion from 262,144 Bytes to 393,216 Bytes.	M83-310	-	-	-	-	-	115/230 VAC 47-63 Hz 6.5/3.25 Amps Max.
M83-313	Same as above with parity.	M83-311	-	-	-	-	-	-
M83-314	Memory Expansion from 393,216 Bytes to 524, 288 Bytes.	M83-312	-	-	-	-	-	-
M83-315	Same as above with parity.	M83-313	-	-	-	-	-	-
M83-316	Memory Expansion from 524,288 Bytes to 655,360 Bytes.	M83-314	-	8	-	-	-	-
M83-317	Same as above with parity.	M83-315	-	8	-	-	-	-
M83-318	Additional 131,072 Byte memory increments.	M83-316	-	-	-	-	-	-
M83-319	Same as above with parity.	M83-317	-	-	-	-	-	-

Field Modification is required for memory expansion of 8/32 Processors delivered prior to June 1, 1976.

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
PROCESSORS (CONTINUED)								
8/32D MEMORIES								
M83-320	Memory expansion from 262,144 bytes to 524,288 bytes.	8/32D	-	8	-	-	-	115/230 VAC 47-63 Hz 6.5/3.25 Amps Max.
M83-321	Same as above with parity.	8/32D and M83-107	-	8	-	-	-	-
M83-322	Additional 256KB memory expansion.	M83-320	-	8	-	-	-	115/230 VAC 47-63 Hz 6.5/3.25 Amps Max.
M83-323	Same as above with parity.	M83-321	-	8	-	-	-	-
MODEL 8/32 C and D PROCESSOR OPTIONS								
M83-102	Hexadecimal Display Panel.	8/32C/D	-	-	1.0A	-	-	-
M83-103	High-Speed Data Handling Option. Provides three additional instructions which process special communication characters, permit memory to memory data moves and perform simultaneous translation and error checking of both LRC and CRC as used by Bisync and SDLC protocols.	8/32C/D and M49-035 or M49-036	.5	-	.7	-	-	-
M83-107	Processor/Memory Parity Generation and checking hardware. Includes parity upgrade and check for basic 131,072 Bytes of memory.	8/32C/D	-	-	-	-	-	-
M83-110	Extended Register Sets for 8/32 Processor. This option is comprised of six additional sets of sixteen 32 bit wide General Purpose Hardware Registers.	8/32C/D	-	-	-	-	-	-
M73-105	Extended Memory Selector Channel. Provides a true cycle stealing access to 1,000,000 bytes of main memory for 8 or 16 bit transfers at rates up to 2 million bytes/sec. Accommodates up to 16 device controllers.	M49-035 or M49-020	1.0	-	5.5	-	-	-
M49-035	System Chassis prewired for up to 8 15" or 16 7" controllers without power. This chassis is used only in 8/32 main frame for memory configurations up to and including 524,288 bytes.	8/32C/D or M49-036	(8.0)	4	-	-	-	-
M83-108	Writable Control Store. Facilitates user alterable microprograms of up to 512, 32-bit words in size.	8/32C/D	-	-	-	-	-	115/230 VAC 6.0/3.5 Amps Max.
M83-111	High Performance Floating Point. Includes a complete set of single and double precision floating point instructions plus eight 32 bit and eight 64 bit floating point registers.	8/32C/D and M49-050	-	-	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
SYSTEM MODULES								
M48-012	Line Frequency Derived Clock. Provides automatic interrupt on each 8.33 ms (60 Hz) or 10 ms (50 Hz).	Any CPU or M49-020	0.5	-	1.0	-	-	-
M48-000	Universal Clock Module. Includes a programmable Precision Interval Clock with both frequency and interval count under hardware control. Also includes an AC line frequency derived clock.	Any CPU or M49-020	0.5	-	1.75	-	-	-
M48-001	8-Line Interrupt Module. Accepts level or transition inputs. Includes separately programmable Mask and Queue Registers, to interface customer interrupt lines to the built-in processor interrupt system.	Any CPU or M49-020	0.5	-	1.0	-	-	-
M48-002	General Purpose Interface Board (15"). Can mount up to 117 4 or 16 pin dual in line package IC's for customer designs.	Any CPU or M49-020	1.0	-	-	-	-	-
M48-013	Universal logic interface. Includes fully buffered output logic for byte and halfword data transfers on Multiplexor Bus or Selector Channel. Unit can mount up to 77,14 or 16 pin dual in line package IC's for custom design. Incorporates wire wrap stakes for circuit integration. Includes internal cable. +5V Power shown for INTERDATA Supplied Logic.	Any CPU or M49-020	1.0	-	1.8	-	-	-
M70-104	Loader Storage Unit Controller with hardware Watchdog Timer and I/C Sockets for up to 16 each M70-105.	Any CPU (except 5/16, 6/16) or M49-020	0.5	-	1.0	-	-	-
M70-105	128 Byte Storage Module for use with M70-104.	M70-104	-	-	0.13	-	-	-
M70-106	16 Bit LSU Bootstrap Loader. Loads core image of BOSS, DOS, RTOS or OS/16MT1 from 2.5; 10 or 40 Megabyte Disc.	M70-104	-	-	-	-	-	-
M70-107	32 Bit LSU Bootstrap Loader. Loads OS/32MT or OS/32ST from 2.5, 10 or 40 Megabyte Disc, and MSM 80, Msm 300 Storage Modules.	M70-104	-	-	-	-	-	-
M70-108	16 Bit LSU Bootstrap Loader. Loads OS/16MT2 from 2.5, 10 or 40 Megabyte Disc, and MSM 80, MSM 300 Storage Modules.	M70-104	-	-	-	-	-	-
M48-005	Multiplexor Bus Buffer extends Drive Capability for up to 16 additional 7" or 15" device controllers.	Any CPU	1.0	-	1.7	-	-	-
M48-014	Input/Output Bus Switch. Allows a common switched bus between processors (one Input/Output Bus switch required per processor sharing a switched bus). One 7" board housed in processor or I/O Expansion chassis and 7" board housed in switched bus chassis. The switched bus must be located in a dedicated chassis with its dedicated power supply.	Any CPU and M49-020 and M49-024	2x0.5	-	1.9x2	-	-	-
M48-017	Extension Cable Kit, 25 feet. Extends I/O Bus Switch distance to 50 feet.	M48-014	-	-	-	-	-	-
M48-018	Manual Control Panel for I/O Bus Switch. Allows manual override control for up to six processors sharing a single common switched bus. Includes keylock power and auto-manual control.	M48-014	-	1	-	-	-	-
M48-019	Manual Control Panel for I/O Bus Switch. Allows manual override control for up to three separate common switched busses each shared by two processors. Includes keylock power and auto-manual control for each bus.	M48-014	-	1	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
SYSTEM MODULES (CONTINUED)								
M48-020	Extended Direct Memory Access Logic Interface for custom logic designs. This module incorporates a high quality interface design for connection to the Extended Direct Memory Access Bus. All necessary interfacing control logic is incorporated with an additional 110 integrated circuit positions available for wire wrapping of customer designed logic.	8/32 or 7/32 CII with either (M73-103 or M73-104)	1.0	-	1.5	-	-	-
M48-050	Buffered Selector Channel provides the 8/32 processor with a direct memory access of up to 1,000,000 bytes of main memory. Includes Burst/halfword mode selection, 16 halfword buffering and burst length select from 2 to 14 halfwords. Data transfer is at rates up to 5.9 million bytes persecond. Accommodates up to 16 device controllers.	8/32	1.0	-	6	-	-	-
M48-045	Micro I/O Bus Adapter. Allows the connection of any device controller designed for use on the micro I/O Bus of INTERDATA's 5/16 Processor to the multiplexor bus of any INTERDATA Processor. Includes Cable.	Any CPU	0.5	-	0.7	-	-	-
MULTIPOINT MEMORY								
<p>(1) Prices are based on orders received which include the order of two 32-bit processors. The processors must contain parity option and have slots available in the chassis for inclusion of the multipoint memory interface. Orders for Multipoint Memory which includes the order for one processor (since the customer already has the second processor on site) requires a test charge of \$1000.00. Customers ordering Multipoint Memory to be added in the field to two existing 32-bit processors requires a test charge of \$1500. The above test charges are in addition to an installation quotation.</p> <p>(2) All requests for Multipoint Memory must include a detailed configuration diagram of the proposed or existing configuration.</p> <p>(3) Components of a Multipoint Memory System may be ordered as spare parts but will only be tested in a minimum configuration prior to shipping from Oceanport. Customers will be required to sign a statement acknowledging that limitation.</p>								
M48-035	Two Port, single bank, 64KB Multipoint Memory System, includes two interface boards, one multiplexor, one controller, one chassis, two-32KB core memory boards with parity, 750ns core cycle time, one power supply, one power control panel, one high density systems cabinet and all related cables.	See Notes 1 & 2	*	(48)	-	-	-	115/230 VAC +10% 47-63 Hz 6.5/3.75 Amp. Max.
M48-038	Two Port, Half Word Interleaved dual bank, 64KB Multipoint Memory System. Includes two multiplexors, two memory controllers, two-32KB core memory boards with parity and 750ns core cycle time, two chassis, two power supplies, one power control panel, one high density systems cabinet and all related cables.	See Notes 1 & 2	*	(48)	-	-	-	115/230 VAC +10% 47-63 Hz 13/7.5 Amp Max.

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
SYSTEM MODULES (CONTINUED)								
M48-040	Two Port, (optional halfword or fullword interleaved) four banks, 128KB Multiport Memory System, includes two interface boards, four multiplexors, four controllers, four-32KB core memory boards with parity and 750ns core cycle time, four chassis, four power supplies, one power control panel, one high density systems cabinet and all related cables.	See Notes 1 & 2	*	(48)	-	-	-	115/230 VAC +10% 47-63Hz 6.5/3.75 Amp. Max.
M48-025	Multiport Memory Interface. 15" circuit board, provides interface between one 32-bit, processor, ESELCH or Special Interface and from one to eight multiport memory banks, includes all related cables.	See Note 3	1	-	9	-	-	-
M48-026	Multiport Memory Controller. 15" circuit board, determines priority of multiplexor service and controls access to the core memory in the memory bank, includes power supply, chassis and related cables.	See Note 3	-	-	3	-	-	115/230 VAC +10% 47-63H Hz 6.5/3.75 Amp. Max.
M48-027	Multiport Memory Multiplexor. Provides a two port access for two Multiport Memory interfaces into a memory bank and determines access priority, interleaving option and addressing. 15" circuit board includes related cables.	See Note 3	1	-	6.2	-	-	-
M48-033	25' Extension Cable. Extends cable length between the Multiport Memory Interface and Multiplexor port (maximum distance 50 feet).	M48-025 & M48-027	-	-	-	-	-	-
M48-041	64KB Multiport Memory expansion with parity and 1000nsec core cycle time. Includes chassis, one memory board, one power supply and related cables.	-	(7)	4	(46.7)	(2.8)	(2.8)	115/230 VAC +10% 47-63 Hz 6.5/3.75 Amp. Max.
M48-042	64KB Multiport Memory expansion with parity and 750nsec core cycle time. Includes chassis, two memory boards, one power supply and related cables.	-	(6)	4	(43.4)	(2.6)	(2.6)	115/230 VAC +10% 47-3.75 Amp. Max.
M48-043	96KB Multiport Memory expansion with parity and 750nsec core cycle time. Includes chassis, three memory boards, one power supply and related cables.	-	(5)	4	(40.1)	(2.4)	(2.4)	115/230 VAC +10% 47-3.75 Amp. Max.
M48-044	128KB Multiport Memory expansion with parity and 750nsec cycle time. Includes chassis, one power supply and related cables.	-	(4)	4	(36.8)	(2.2)	(2.2)	115/230 VAC +10% 47-3.75 Amp. Max.

*Requires one card slot in each CPU I/O chassis for installation of Multiport Memory Interface.

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
SYSTEM MODULES (CONTINUED)								
M48-056	Power Control Panel and High Density Systems Cabinet. For use of up to four banks of Multiport Memory. Provides manual control of power to individual banks and automatic sensing and visual indication in the event of power loss in any of the one to four memory banks. 60 Hz	See Note 3	-	1	-	-	-	-
M48-057	Same as M48-056, 50 Hz.	See Note 3	-	1	-	-	-	-

*Requires one card slot in each CPU I/O chassis for installation of Multiport Memory Interface.

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
TERMINALS								
CAROUSEL 30								
M46-060	Carousel 30 Keyboard Printer Terminal. Print capabilities are 30 characters per second using a 64 character ASCII subset with an 132 character print line. The terminal operates via a 20 ma current loop interface and includes external cable.	M48-024	-	-	-	-	-	110VAC±10% 3.5 Amps. Max.
M46-061	Same as M46-060, 50 Hz	M48-024	-	-	-	-	-	220 VAC±10% 1.75 Amps. Max.
M48-024	Current loop interface.	M46-060 061	0.5	-	1.6	-	-	-
M46-860	Pin Feed adjustable width forms tractor for Carousel 30 Terminal with a 132 Character print line.	M46-060 061	-	-	-	-	-	-
M46-865	Acoustic Cover.	M46-860	-	-	-	-	-	-
M46-845	Pedestal mount for free standing Installation of Carousel 30 Terminal.	M46-060 061	-	-	-	-	-	-
M46-906	Basic Carousel Supplies Kit—includes 6 Black fabric ribbon cartridges and 3 Carousel print cups.	M46-060 061	-	-	-	-	-	-
CAROUSEL 35								
M46-062	Carousel 35 Keyboard Printer Terminal. Print capabilities are 30 characters per second using a 64 character ASCII subset with an 132 character print line. The terminal operates via a 20 ma. current loop interface, includes external cable and Friction-feed paper handling for 15" forms width. This unit is a buffered terminal and operates at a rate of 1320 bps between the terminal and computer interface.	M48-021	-	-	-	-	-	110 VAC ±10% 3.5 Amps. Max.
M46-063	Same as M46-062, 50 Hz.	M48-021	-	-	-	-	-	220 VAC±10% 1.75 Amps. Max.
M48-021	Current Loop Interface.	M46-062 063	0.5	-	1.6	-	-	-
M46-860	Pin Feed adjustable width forms tractor for Carousel 35 Terminal with a 132 character print line.	M46-062 063	-	-	-	-	-	-
M46-881	96 Character Set ASCII character set for Carousel 35 Terminal. Includes Upper and Lower case letters, numerals and special characters.	M46-062 063	-	-	-	-	-	-
M46-821	120 CPS Paper Tape Reader.	M46-062, 063	-	-	-	-	-	-
M46-865	Acoustic Cover.	M46-860	-	-	-	-	-	-
M46-845	Pedestal Mount for free Standing Installation of Carousel 35 Terminal.	M46-062 063	-	-	-	-	-	-
M46-906	Basic Carousel Supplies Kit—includes 6 black fabric ribbon cartridges and 3 Carousel print cups.	M46-062 063	-	-	-	-	-	-

CAROUSEL 300								
M46-064	Carousel 300 Keyboard Printer Terminal. Print capabilities are 30 characters per second using a 96 character ASCII subset with 132 character print line. The Terminal includes a numeric pad as well as a standard keyboard. Interfacing is via an RS232C interface which can be used locally or as remote terminal with a Bell 103 or equivalent modem. Includes Electronic Format control for horizontal and vertical tab control.	M47-102	-	-	-	-	-	110 VAC±10% 3.5 Amps. Max.
M46-065	Same as M46-064, 50 Hz.	M47-102	-	-	-	-	-	220 VAC ± 10% 1.75 Amps. Max.
M46-810	External cable assembly for connection of local Carousel 300 Terminal to Programmable Asynchronous Single Line Adapter, 25 feet.	M47-102	-	-	-	-	-	-
M46-811	External cable assembly for connection of Carousel 300 Terminal to Bell 103 modem or equivalent, 50 feet.	M47-102, M10-054	-	-	-	-	-	-
M46-860	Pin Feed adjustable width forms tractor for Carousel 300 Terminal with a 132 character print line.	M46-064, 065	-	-	-	-	-	-
M46-865	Acoustic Cover.	M46-860	-	-	-	-	-	-
M46-845	Pedestal mount for free standing installation of Carousel 300 Terminal.	M46-064, 065	-	-	-	-	-	-
M46-906	Basic Carousel Supplies Kit—includes 6 black fabric ribbon cartridges and 3 Carousel print cups.	M46-064, 065	-	-	-	-	-	-

DISC (CONTINUED)								
M46-605	Model MSM300E 256,000,000 Byte Removable Mass Media Storage Module Expansion Drive. This unit is a 3330 type disc drive using a 19 surface disc pack. Disc transfer rate is 1,200,000 bytes per second, average access time is 30ms. Storage capacity is 256,000 bytes fully formatted. Includes a fully formatted disc pack, write protect feature, damage preventing pack interlock and free standing low noise acoustic cabinet. 60 Hz.	M46-604	-	-	-	-	-	208 VAC 8.2 Amps. Run 22 Amps. Start
M46-606	Same as M46-604, 50 Hz.	M70-103 or M73-105	2	-	7	-	-	220 VAC 4.9 Amps. Run 22 Amps. Start
M46-607	Same as M46-605, 50 Hz.	M46-606	-	-	-	-	-	220 VAC 4.9 Amps. Run 22 Amps. Start
M46-609	67,000,000 Byte Disc Pack, 5 Platter, fully formatted.	M46-600 thru M46-603	-	-	-	-	-	-
M46-610	256,000,000 Byte Disc Pack, 12 Platter, fully formatted.	M46-604 thru M46-607	-	-	-	-	-	-
DUAL PORT OPTIONS ARE HARDWARE ONLY OPTIONS AND DO NOT CONTAIN ANY OPERATIONAL SOFTWARE SUPPORT.

COMMUNICATIONS ADAPTERS								
SYNCHRONOUS ADAPTERS								
M47-000	Bell 201 Type Data Set Adapter or equivalent, Half/Full Duplex synchronous operation. Speeds to 9600 Baud. Double character buffered operation, full data set control and status. Includes internal cable.	Any CPU or M49-020	1.0	-	2.4	0.6	0.6	-
M47-001	Bell 301 Type Data Set Adapter or equivalent, Half/Full Duplex synchronous operation. Speeds to 50,000 Baud, double character buffered operation, full data set control and status. Includes internal cable.	Any CPU or M49020	1.0	-	2.0	0.05	0.05	-
M47-002	Quad Synchronous Adapter (QSA) interfaces a wide variety of synchronous data sets to either the I/O mux bus of an INTER-DATA processor, the selch bus or the private bus of the Memory Access Multiplexor (MAM). Each QSA provides four communication line interfaces either half or full duplex. TTL voltage level outputs and full modem control. Communication parameters, such as synch character, character length, or odd/even parity are under program control. With the appropriate line conditioning module and cable, the QSA interfaces to most 200 and 300 data sets.	Any CPU or M49-020	1	-	4.8	-	-	-
M47-003	Same as M47-002 plus the additional capability of Zero Bit Insertion/Deletion which supports the Synchronous Data Line Control (SDLC) procedure.	Any CPU or M49-020	1	-	4.8	-	-	-
M47-004	Line Conditioning Module (LCM) interfaces two communication lines type CCITT V.35 modems and the Quad Synchronous Adapter (QSA) and future adapters. This LCM is a 7 x 15 inch board and requires the cable assembly M47-008 which has connection for one Bell System modem type 306.	M47-002 or M47-003						
M47-005	Line Conditioning Module (LCM) interfaces four (4) communication lines conforming to RS232/CCITT V 24 specifications and the Quad Synchronous Adapter (QSA). This LCM is on a 7 x 15 inch board and accommodates two cable assemblies M47-007. Each cable assembly has connections for two (2) Bell System 200 Series modems.	M47-002 or M47-003	.5	-	1	-	-	-
ASYNCHRONOUS ADAPTERS								
M47-102	Programmable Asynchronous Single Line Adapter for 103/202 Data Set or local RS-232 terminal, 75 to 9600 Baud. Full or half duplex operation. Program selectable to one of two baud rates, character length, stop bits, parity, echoplex, and line break RS232C/CCITT interface. Handles switched or private line. Includes internal cable.	Any CPU or M49-020	0.5	-	1.6	-	-	-
M47-100	Asynchronous Line Module Controller. Provides clocks (any four of eight specified speeds up to 9600 baud) common control and bussing for up to 23 Programmable Asynchronous Line Modules—Type M47-101.	M49-021	1.0	-	2.5	-	-	-
M47-101	Programmable Asynchronous Line Module. Provides interface for up to 4 Full/Half Duplex asynchronous data sets—Bell type 103/202. Program selectable to 1 of 4 speeds, character format, stop bits, parity echoplex, and line break. Includes full data set control and status RS232C or CCITT interface. Includes internal cable.	M47-100	1.0	-	2.5	0.11	0.15	-
M49-021	Programmable Asynchronous Line System Chassis. Prewired to handle up to eight each 15" modules. These may be M47-10 or M47-100 cards only—without power supply.	Any CPU or M49-020	(8)	4	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
COMMUNICATIONS ADAPTERS (CONTINUED)								
AUTO-DUAL COMMUNICATION ADAPTER								
M10-022	Automatic Dial Unit Controller. Provides a fully buffered interface and program control of the Bell 801 (A/C) Data Auxiliary set and permits calling any telephone number in the switch-board network. Control for 4 lines.	M49-003	1W	-	0.8	0.13	0.13	-
DATA SET CABLES								
M10-054	Data Set Cable, 50 feet, external cable to interconnect an RS-232 compatible data set to the data set adapter internal cable.	M47-000 M47-101 or M47-102 or M10-022	-	-	-	-	-	-
M10-056	Data Set Cable—50 feet, external cable to interconnect a Bell 301 type data set to the data set adapter internal code.	M47-001	-	-	-	-	-	-
M47-007	Cable Assembly which will connect the LCM (RS232/V.24) and two Bell System 200 Series modems. Two of these cable assemblies will be required by the LCM. Length of cable will be 25 feet.	M47-005	-	-	-	-	-	-
M47-008	Cable Assembly which will connect the LCM (CCITT V.35) and one Bell System 306 type modem. This cable assembly accommodates one Bell System 306 type modem. This cable assembly accommodates one output of the LCM. Length of cable will be 25 feet. MUST INCLUDE M49-020 AND APPROPRIATE POWER SUPPLY FOR 5/16.	M47-004	-	-	-	-	-	-
HOST PROCESSOR COMMUNICATION INTERFACES								
M47-202	Interfaces to an IBM 360/370 Multiplexor, Block Multiplexor, or Selector Channel. Operates in the Multiplex Burst or Forced Burst modes. Includes Interface and Internal cabling. User must supply IBM cabling and terminators, if required, and driver software. Test software is included for most configurations. Maximum transfer rate is 500KB. Does not accommodate the IBM Bus Extension Feature or EPO. This interface has been installed on various 360 and 370 systems; however, because of the possible system variations and revisions experienced within a system, each interface installation must be individually reviewed. Oceanport will therefore review each interface implementation as defined by the customer on an application checklist prior to order acceptance. IBM equipment testing time must be provided by the customer for installation verification. A 19" cabinet mounted test panel is separately available (see maintenance equipment M49-402.)	Any CPU or M49-020 plus customer supplied application checklist	2	-	7.70	-	-	-
M47-203	Multiple address up to 256 contiguous addresses in binary multiples. Interfaces to an IBM 360/370 Multiplexor, Block Multiplexor, or Selector Channel. Operates in the Multiplex, Burst on Forced Burst modes. Includes Interface and Internal Cabling. User must supply IBM cabling and terminators, if required, and driver software. Test software is included for most configurations. Maximum Transfer rate is 500KB. Does not accommodate the IBM Bus Extension Feature or EPO. This interface has been installed on various 360 and 370 systems; however, because of the possible system variations and revisions experienced within each system, each interface installation must be individually reviewed. Oceanport will therefore review each interface implementation as defined by customer on application checklist prior to order acceptance. IBM equipment testing time must be provided by the customer for installation verification. A 19" cabinet mounted test panel is separately available (see maintenance equipment M49-402).	-	2	-	7.70	-	-	-

COMMUNICATIONS ADAPTERS (CONTINUED)

MEMORY ACCESS MULTIPLEXOR

M47-010	The Memory Access Multiplexor (MAM) provides the capability of interfacing devices requiring high throughput via the EDMA-bus. The MAM provides full duplex operation of multiple devices (63 address maximum). The unit does not provide any character stripor insertion, but does provide special character recognition of four separate communication codes (ROM Controlled). It does provide a private bus for device controllers which are identical to the I/O mux bus, thus allowing all character interrupting I/O devices access. The buffer switching or data chaining capability minimizes software overhead.	8/32 or 7/32 with M73-103 or M73-104	2	-	9	-	-	-
---------	--	--------------------------------------	---	---	---	---	---	---

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
DIGITAL INPUT/OUTPUT								
M48-400	Contact Closure Detector Module. Provides 16 optically isolated TTL/DTL compatible inputs with built in bounce filtering which are capable of sensing open and closed contacts or optionally, change of state detection. Includes internal cable mating connector for 24 to 30 gauge stranded wire.	Any CPU or M49-020	0.5	-	1.5	-	-	-
M48-500	Relay Driver Module. Capable of driving 6 individually selectable relays at + 15 VDC. 100 ma. peak. All outputs are individually latched and driven by open collector circuits. Includes internal cable mating connector for 24 to 30 gauge standard wire.	Any CPU or M49-020	0.5	-	1.0	-	-	-
M07-860	Digital Multiplexor Controller plus first Expansion Chassis (M07-864). This is a Universal Interface for both Input and Output Scanner Modules. One Controller can control up to 16 each M07-861 and 16 each M07-862 Modules.	M49-003	1C	3	1.0	-	-	-
M07-861	128 Line Input Module.	M07-860	-	-	0.8	0.7	0.1	-
M07-862	128 Line Output Module. Provides open Collector Latched Output and can drive 4 each M48-004.	M07-860	-	-	2.8	-	-	-
M07-864	Digital Multiplexor Expansion Chassis. Provides Slots for four 128-Line Input/Output Modules.	M07-860	-	3	-	-	-	-
M48-604	2 Wire Screw Termination Panel for Digital Inputs. Provides for 64 paired inputs. 12" high hinged panel, load resistors for use with M48-007 28 Volt Power Supply and cable to Digital Multiplexor.	M07-861 or M48-400	-	7	-	-	-	-
M48-605	2 Wire Screw Termination Panel for Digital Inputs. Provides for 64 paired inputs. 12" high hinged panel, load resistors for use with M48-008 48 Volt Power Supply and cable to Digital Multiplexor.	M07-861 or M48-400	-	7	-	-	-	-
M48-007	28 Volt Power Supply for two M48-604 2 Wire Screw Termination Panels (128 lines).	M48-604	-	4	-	-	-	115 VAC ±10% 2 Amps. Max.
M48-008	48 Volt Power Supply for two M48-605 2 Wire Screw Termination Panels (128 lines).	M48-605	-	4	-	-	-	115 VAC ±10% 2 Amps. Max.
M48-004	Relay Closure Panel—32 socketed Mercury Wetted Form C relays rated at 500 VAC/2 amps. Includes mating connectors for cable to digital multiplexor.	M07-862 or M48-604 or M48-605	-	4	-	-	-	115/230 VAC ±10% 2.3 Amps. Max.
M07-865	Relay Closure Panel—32 socketed Form C relays rated at 230 VAC/5 amps. Includes mating connectors for cable to digital multiplexor.	M07-862 or M48-604 or M48-605	-	4	-	-	-	115/230 VAC ±10% 2.3 Amps. Max.
M49-202	Cable assembly and installation, 16 line digital input/output module to termination panel. This is a variable length cable that is configuration dependent. Available in 4, 8, or 12 foot lengths.	M48-400 or M48-500 and M48-604 or M48-605	-	-	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
MINI INPUT/OUTPUT SYSTEMS								
DIGITAL INPUT/OUTPUT								
M48-450	Digital Input/Output Module. Provides 16 discrete latched outputs with output voltage up to 25 volts and current sink up to 100 milliamps, 16 discrete non-latched inputs with voltage sense or contact sense of 5 to 50 volts and input/output synchronizing logic. Note: Cables or connector kits are not included.	Any CPU or M49-020	0.5	-	1.0	-	-	-
M48-618	Digital Input/Output Module Connector Kit. Provides connector and pins for mating to Digital Input/Output Module. Note: Input and outputs each require a separate connector kit.	M48-450	-	-	-	-	-	-
M48-612	Digital Input/Output Module Cable Assembly. A ten foot open-ended interior cable to connect with termination panel M48-606. Note: Input and outputs each require a separate cable assembly for connection to Termination Panel M48-606.	M48-450	-	-	-	-	-	-
DIGITAL TO ANALOG OUTPUT SYSTEM								
M48-353	Two Channel 12 Bit Digital to Analog Output Module. Provides two channels of analog output with each channel strap selectable for ranges of ± 10.24 , ± 5.12 , 2.56, 0 to ± 5.12 or 0 to ± 10.24 volts. Output current capacity is 5 ma. Note: Cable or connector kit is not included.	Any CPU or M49-020	0.5	-	1.5	-	-	-
M48-354	Two Channel 12 Bit Digital to Analog Output Module with Scope Control. Provides two channels of analog output with each channel strap selectable for ranges of ± 10.24 , ± 5.12 , ± 2.56 , 0 to ± 5.12 or 0 to ± 10.24 volts. In addition, control signal of write through, non-store, erase, Z axis enable or disable are provided for oscilloscope control. Output current capacity is 5 ma. Note: Cable or connector kit is not included.	Any CPU or M49-020	0.5	-	1.5	-	-	-
M48-355	Four Channel 12 Bit Digital to Analog Output Module. Provides four channels of analog output with each channel strap selectable for ranges of ± 10.24 volts, ± 5.12 , ± 2.56 , 0 to ± 5.12 or 0 to ± 10.24 volts. Output current capacity is 5 ma. Note: Cable or connector kit is not included.	Any CPU or M49-020	0.5	-	1.5	-	-	-
M48-619	Analog Input/Output Module Connector Kit. Provides mating connector and pins for Digital to Analog Output Module. Note: One connector kit is required for each M48-353 and two connector kits are required for each M48-354 or M48-355.	M48-353 M48-354 M48-355	-	-	-	-	-	-
M48-613	Two Channel Digital to Analog Output Module Cable Assembly. A ten foot open ended interior cable to connect with termination panel M48-606. Note: One cable assembly is required for each M48-353 or M48-354 Module.	M48-353 or M48-354	-	-	-	-	-	-
M48-620	Scope Control Cable Assembly. A ten foot open ended interior cable to connect with Termination Panel M48-606 for Scope Control feature.	M48-354	-	-	-	-	-	-
M48-614	Four Channel Digital to Analog Output Module Cable Assembly. A ten foot open ended interior cable to connect with Termination Panel M48-606. Note: One cable assembly is required for each four channel Digital to Analog Output Module.	M48-355	-	-	-	-	-	-

MINI INPUT/OUTPUT SYSTEMS (CONTINUED)								
ANALOG TO DIGITAL INPUT SYSTEM								
M48-214	10 bit, (9 bits + sign), 33 KHz Analog to Digital Input Module. Includes A/D converter with sample and hold and multiplexor for either 16 channels of single ended input or 8 channels differential input. Input ranges are strap selectable for ranges of ± 10.24 , ± 5.12 , ± 2.56 , 0 to ± 5.12 or 0 to ± 10.24 volts. Note: Cable or connector kit is not included.	Any CPU or M49-020	1.0	-	3.5	-	-	-
M48-215	10 bit, (9 bits + sign), 75 HKz analog to Digital Input Module. Includes A/D converter with sample and hold and multiplexor for either 16 channels of single ended input or 8 channels of differential input. Input ranges are strap selectable for ranges of ± 10.24 , ± 5.12 , ± 2.56 , 0 to ± 5.12 or 0 to ± 10.24 volts. Note: Cable or connector kit is not included.	Any CPU or M49-020	1.0	-	3.5	-	-	-
M48-212	12 bit, (11 bits + sign), 20 KHz Analog to Digital Input Module. Includes A/D converter with sample and hold and multiplexor for either 16 channels of single ended input or 8 channels of differential input. Input ranges are strap selectable for range of ± 10.24 , ± 5.12 , ± 2.56 , 0 to ± 10.24 volts. Note: Cable or connector kit is not included.	Any CPU or M49-020	1.0	-	3.5	-	-	-
M48-213	12 bit, (11 bits + sign), 40 KHz Analog to Digital Input Module. Includes A/D converter with sample and hold and multiplexor for either 16 channels of single ended input or 8 channels of differential input. Input ranges are strap selectable for ranges of ± 10.24 , ± 5.12 , ± 2.56 , 0 to ± 10.24 volts. Note: Cable or connector kit is not included.	Any CPU or M49-020	1.0	-	3.5	-	-	-
M48-207	Analog to Digital Module Expansion Multiplexor. Provides an additional 16 channels of single ended input or 8 channels of differential input. Not a field installable option. Must be purchased coincident with prerequisite.	M48-212 or M48-213 or M48-214 or M48-215	-	-	-	-	-	-
M48-216	Programmable Gain Option for Analog to Digital Input Modules. Provides four programmable system gains of 1, 2, 4, or 8 with strapped voltage ranges of ± 10.24 , 0 to ± 5.12 or 0 to ± 10.24 volts full scale. Not a field installable option. Must be purchased coincident with prerequisite.	M48-212 or M48-213 or M48-214 or M48-215	-	-	-	-	-	-
M48-217	Programmable Gain and Dual Low Level Instrumentation Amplifiers Option for Analog to Digital Input Modules. Provides four programmable system gains of 1, 2, 4, or 8 with strapped voltage ranges of ± 10.24 , 0 to ± 5.12 or 0 to ± 10.24 volts full scale and two differential instrumentation amplifiers with jumper selectable gains of 10, 100 and 500. Note: Cable or connector kit for dual instrumentation amplifiers are not included. Not a field installable option. Must be purchased coincident with prerequisite.	M48-212 or M48-213 or M48-214 or M48-215	-	-	-	-	-	-
M48-618	Analog to Digital Input Module Connector Kit. Provides mating connector and pins for Analog to Digital Output Module. Note: One connector kit is required for each Analog to Digital Output Module or Analog to Digital Expansion Multiplexor.	M48-212 or M48-213 or M48-214 or M48-215 or M48-207	-	-	-	-	-	-
M48-619	Analog Input/Output Module Connector Kit. Provides mating connectors and pins for Dual Low Level Instrumentation Amplifier Option.	M48-217	-	-	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
MINI INPUT/OUTPUT SYSTEM (CONTINUED)								
ANALOG TO DIGITAL INPUT SYSTEM (CONTINUED)								
M48-615	Analog to Digital Input Module Single Ended Input Cable Assembly. A ten foot open ended interior cable for connection to Termination Panel M48-606. Note: One cable assembly is required for each 16 lines of single ended input.	M48-212 or M48-213 or M48-214 or M48-215 or M48-207	-	-	-	-	-	-
M48-616	Analog to Digital Input Module Differential Input Cable Assembly. A ten foot open ended interior cable for connection to Termination Panel M48-606. Note: One cable assembly is required for each 8 lines of differential input.	M48-212 or M48-213 or M48-214 or M48-215 or M48-207	-	-	-	-	-	-
M48-617	Dual Low Level Instrumentation Amplifiers Cable Assembly. A ten foot open ended interior cable for connection to Termination Panel M48-606.	M48-217	-	-	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
REAL TIME ANALOG SYSTEM								
M48-603	Real Time Analog System Controller. Controller contains two 32 word solid state buffer memories which provide a continuous load and unload feature allowing exceptional data throughput rates. The controller operates in a sequential and random mode of scanning. Includes direct connect 10 foot cable to first RTAS system chassis.	Any CPU or M49-020	1.0	-	4.0	-	-	-
M48-610	Bus Terminator Card. Plugs into last system chassis on the RTAS controller.	Any RTAS System Chassis	-	-	-	-	-	-
M48-607	Chassis-to-Chassis Bus Cable. 2 feet. For multiple system chassis (up to 8) in an RTAS.	-	-	-	-	-	-	-
WIDE RANGE ANALOG INPUT SYSTEM								
M48-308	Wide Range Input System Chassis, 200 s.p.s., 13 bit (12 bits + sign). Prewired for up to 16 relay input modules, includes programmable gain amplifier, dual slope analog integrator, gain and other control logic and power supply. 13 program selectable ranges from ± 2.5 mv to ± 10.24 volts, 200 VDC on peak AC common mode voltage tolerance. 120 db CMR at 60 Hz with 1000 ohms unbalanced. 60 Hz.	M48-603	-	8	-	-	-	115 VAC $\pm 10V$ 0.9 Amps. Max.
M48-309	Same as M48-308, 50 Hz.	M48-603	-	8	-	-	-	230 VAC $\pm 20V$ 0.45 Amps. Max.
M48-300	Wide Range Input System Chassis, 40 s.p.s., 13 bit (12 bits + sign). Prewired for up to 16 relay input modules, includes programmable gain amplifier, dual slope analog integrator, gain and other control logic and power supply. 13 program selectable ranges from ± 2.5 mv to ± 10.24 volts, 200 VDC or peak AC common mode voltage tolerance 120 db CMR at 60 Hz with 1000 ohms unbalanced. 60 Hz.	M48-603	-	8	-	-	-	115 VAC $\pm 10V$ 0.9 Amps. Max.
M48-301	Same as M48-300, 50 Hz	M48-603	-	8	-	-	-	230 VAC $\pm 20V$ 0.45 Amps. Max.
M48-302	Wide Range Input System Chassis, 100 s.p.s., 13bit (12 bits + sign). Prewired for up to 16 relay input modules, includes programmable gain amplifier, dual slope analog integrator, gain and other control logic and power supply. 13 program selectable ranges from ± 2.5 mv to ± 10.24 volts, 200 VDC or peak AC common mode voltage tolerance. 120 db CMR at 60 H with 1000 ohms unbalanced. 60 Hz.	M48-603	-	8	-	-	-	115 VAC $\pm 10V$ 0.9 Amps. Max.
M48-303	Same as M48-302, 50 Hz.	M48-603	-	8	-	-	-	230 VAC $\pm 20V$ 0.45 Amps. Max.
M48-304	Wide Range Input Expansion Chassis, 40/100/or 200 s.p.s. Prewired for up to 16 relay input modules.	M48-300 M48-301 M48-302 M48-303	-	4	-	-	-	115/230 VAC $\pm 20V$ 0.45 Amps. Max.
M48-307	Dry Relay Multiplexor Input Card, 200 S.p.s. Includes switching for 8 channels, and mating connector for cable. 2.5 to 10240 millivolts.	M48-308 M48-309	-	-	-	-	-	-
M48-305	Mercury Wetted Relay Multiplexor Input Card, 100 s.p.s. Includes switching for 8 channels, and mating connector for cable. 2.5 to 10240 millivolts.	M48-300 M48-301 M48-304	-	-	-	-	-	-

REAL TIME ANALOG SYSTEM (CONTINUED)								
TERMINATION PANELS								
M48-606	Analog Termination Panel. Includes screw posts for up to 96 single connections. (May be used as 32 3-wire or 48 2-wire termination).	Wide Range or Low Level A/D	-	4	-	-	-	-
M48-601	Thermo-couple Termination Panel. Includes screw posts for up to 32 3-wire terminations (without RTD).	Wide Range or Low Level A/D	-	5	-	-	-	-
M48-602	Thermo-couple Termination Panel. Includes screw posts for up to 32 3 wire terminations and resistance temperature detector (RTD).	Wide Range or Low Level A/D	-	5	-	-	-	-
M49-028	20 volt power supply. For RTD power, 60 Hz.	M48-602	-	3	-	-	-	115 VAC ±10V 0.8 Amps. Max.
M49-029	20 volt power supply. For RTD power, 50 Hz.	M48-602	-	3	-	-	-	230 VAC ±20V 0.4 Amps. Max.
M49-205	Cable assembly and installation. Provides variable length cable to inter-connect analog input or output card to a termination panel.	M48-606 or M48-601 or M48-602 and appropriate analog card	-	-	-	-	-	-

Product Number	Description	Prereq	Card Slots	Mntg Units	+5V Pwr	+16V Pwr	-16V Pwr	AC Power
CABINETS, CHASSIS, AND POWER SUPPLIES								
M49-040	System Cabinet, includes side skins, chassis support rails, exhaust fans and filter, filler panels or half door, casters, levelers, and I/O distribution panel. Requires the selection of either a 24 AMP (M49-041) or 48 AMP (M49-042) AC Distribution Panel as a no charge option.	M49-041 or M49-042	-	(37)	-	-	-	-
M49-036	High Density System Cabinet designed for systems that have high cooling requirements (8/32 Shared Memory, etc.) or densely package equipment. System cabinet includes; cooling plenum, chassis support rails, 350 CFM blower, casters, levelers, I/O distribution panel and air vent switch for automatic system shut down in case of blower failure. For use with M49-035 system chassis only. Requires the selection of either a 24 AMP (M49-041) or 48 AMP (M49-042) AC distribution panel as a no charge option.	M49-041 or M49-042	-	(37)	-	-	-	-
M49-041	24 AMP AC Distribution Panel (SEE CHART II)	M49-040 or M49-036	-	-	-	-	-	-
M49-042	48 AMP AC Distribution Panel (SEE CHART II)	M49-040 or M49-036	-	-	-	-	-	-

CHART I

Type Cabinet	RECOMMENDED AC DISTRIBUTION PANEL	
	24 Amp M49-041	48 Amp M49-042
Standard Cabinet M49-041	x	x
High Density Cabinet M49-036	x	x
8/32 Processor System M49-036		x
Multiport Memory System M49-036		x
75 ips Mag Tape M49-040	x	
NOTE		
The above chart should be utilized as a general guideline for determining proper convenience panel selection. To define the proper panel for a particular configuration, add all the AC Input Current Ratings for all devices (including systems power supplies) to be connected to the convenience panel. The additive result will define which panel to select.		

*The input power required at the installation to adequately support the specific cabinet. This is not the UL rating of the cabinet AC service.

CABINETS, CHASSIS, AND POWER SUPPLIES

**CHART II
TECHNICAL DATA**

Panel	Cord Plug		Receptacle		*Input Power

28-017	Conversion Equipment Test Simulator. For dynamic testing of the RTAS controller. Requires Test Program 06-147	M48-603	1	-	1.5	-	-	-
16-398	Half Board Kit	-	-	-	-	-	-	-

SECTION II CONFIGURATIONS

GENERAL CONFIGURATION NOTES

1. This price list should be used in conjunction with the appropriate product Configuration Data Sheets. These sheets, filled out, are required before an order can be accepted. If no Configuration Data Sheets are available or if additional assistance is required, refer to the nearest INTERDATA Sales Office.
2. Considerable configuration flexibility is possible with all INTERDATA systems. For this reason, it is imperative to carefully perform the following operations:
 - (a) Ensure that all the prerequisites are met for the software.
 - (b) Match the number of card slots required to the available slots in the processor chassis, adding the required bus buffers and expansion chassis depending on whether the expansion cards are 10", 10" wirewrap or 7"/15" controllers.
 - (c) Ensure that Selector Channels, when present, are placed in the slots shown on the Configuration Data Sheets.
 - (d) Perform a power balance for all chassis beyond the processor chassis to ensure adequate power for the initial configuration, and allowing for further expansion, if desired.
 - (e) Ensure that sufficient numbers of system cabinets are present.
3. All products using 7" printed circuit boards include a halfboard mounting kit. When a system is configured, 7" boards are normally mounted in adjacent slots in pairs.
4. Necessary hardware for mounting peripheral devices, power supplies and chassis, is included as part of the product. (Note: This hardware is generally suitable for INTERDATA supplied cabinets only).
5. All products are supplied with cables of varying types unless other specified in the price list. A brief explanation of their type follows.
 - (a) Internal Cable—signal cable from controller board to I/O convenience panel to peripheral device.
 - (b) External Cable—signal cable from I/O convenience panel to peripheral device.
 - (c) Direct Connect Cable—signal cable from controller board to peripheral device directly.
 - (d) Chassis Signal Cables—provides means of interconnecting Input/Output and memory buses of processors and expansion chassis.

NOTE:

Selector Channels, Bus Buffers and chassis do not include preselected chassis Signal Cables. For expansion orders these cables must be specified separately on the purchase order at no charge.

6. Multiplexor Bus loading requirements are specified in the notes section for each processor. The following rules must be followed when considering Multiplexor Bus loading:
 - (a) A bus may be regenerated using a Multiplexor Bus Buffer (M48-005), once regenerated, an additional 16 7" or 15" device controllers can be supported.
 - (b) The Selector Channel (M70-103) (M73-105) counts as one device since it generates its own private bus. When a Selector Channel is placed in a processor or first expansion chassis, the connector 1 slots below the Selector Channel become its private bus. Connector 1 is the right side as viewed from the rear of chassis. Any 15" controller placed in a Selector Channel bus slot must interface via Connector 1. Connector 0 slots below a Selector Channel contain an unbuffered continuation of the Multiplexor Bus above the Selector Channel. It is therefore, possible to insert 7" controllers in Connector 0 slots below a Selector Channel and have them appear on the Multiplexor Bus.
 - (c) In no case should there be more than two expansion chassis being driven on a bus without using a Multiplexor Bus Buffer to regenerate the bus.
 - (d) As seen on the processor's Multiplexor Bus, Multiplexor Bus BUFFERS AND Selector Channels appear as only one load each (hence only one delay time each when inactive) no matter how many controllers are on the private buses generated by Memory Bus Buffers or Selector Channels. It is thus possible to segment the I/O bus where system response is critical for certain devices.
7. All INTERDATA system cabinets are wired for 30 Amp service. The U/L approved 30 Amp plug is a three blade twist lock type. It is important to note that a three (3) wire grounding 30A, 125VAC receptable, (Hubbell #2610) or equivalent is required.
8. CARD SLOTS
 - 0.5 7" x 15" board occupying one half slot in a processor chassis or M49-020/035 expansion chassis
 - 1.015" x 15" board occupying one slot in a processor chassis or M49-020/035 expansion chassis
 - 1C 10" x 10" board occupying, with a M49-003 10"/15" adapter, one slot in a processor M49-020/035 expansion chassis
 - 1W 10" x 10" wirewrapped board, occupying, with a M49-003 10"/15" adapter, two slots in a processor or M49-020/035 expansion chassis

MODEL 5/16 CHASSIS WITH INTEGRAL POWER SUPPLY

Integral Processor Power Supply

 2 } Multiplexor Bus I/O Ex-
 1 } pansion for either 7 or 15
 0 } Inch Controllers.

- Turnkey Console (M61-110) is optional for use with 5/16 chassis.
- ASCII Programmer Console requires use of Serial Input/Output Port (M51-100). Standard ASCII devices for Serial Input/Output Port, are Carousel 30 (M46-060), Carousel 35 (M46-062), ASR-33 teletypewriters (M46-000, 002, 004, 005), ASR-35 teletypewriters (M46-001, 003), and Alphanumeric Video Displays.
- The Multiplexor Bus supports 16 loads with 7 or 15 inch device controllers.
- Chassis slot positions 0-2 may be used for only 7 or 15 inch multiplexor bus device. Because the integral power supply of the 5/16 chassis does not produce any +16 or -16 volts, the following controllers may not be used:
 M47-000 201 Data Set Adapter
 M47-001 301 Data Set Adapter
 M10-022 801 Automatic Dial Unit Controller
- Power supply is furnished for Processor Chassis only.

- Display Panel (M61-108 and M61-109) and Turnkey Console (M61-110) are optional. A prerequisite for the Display Panels or Turnkey Console is the Display Controller (M61-102).
- The Multiplexor Bus supports 16 loads with 7" or 15" device controllers.
- The Display Controller (M61-102 and the Multiply/Divide Option (M61-107) each constitute one load on the Multiplexor Bus.
- Chassis slot position 6 is the only slot available for memory. Core memory module of 8, 16, 32, or 64K bytes may be used in this slot.
- The left half of chassis slot position 5 is used for Hardware Multiply/Divide Option (M61-107) or a 7" I/O controller. The right half of chassis slot position 5 is used for the Display Controller (M61-102), the Automatic Load Option (M61-103), the combination Display Controller Automatic Load Option (M61-104) or a 7" I/O controller. If none of the above mentioned processor options are used in either the left or right half of the slot, a 15" I/O controller may be used.
- Three Selector Channels (M70-103) are supportable in chassis slot positions 4, 2, and 0.
- The Memory Bus does not extend to Expansion Chassis (M49-020) from the 6/16 Processor Chassis. Only Multiplexor or Selector Channel Buses can be extended to the Expansion Chassis.
- Power supply is furnished for Processor chassis only. Select expansion power by performing a power balance.

- Display Panel (M61-108 and M61-109) and Turnkey Console (M61-110) are optional. A prerequisite for the Display Panels or Turnkey Console is the Display Controller (M61-102).
- The Multiplexor Bus supports 16 loads with 7" or 15" device controllers.
- The Display Controller (M61-102) and the Multiply/Divide Option (M61-107) each constitute one load on the Multiplexor Bus.
- Chassis slot position 3 is the only slot available for memory. MOS memory modules of 8, 16, 24, 32, 40, 48, 56, and 64K bytes may be used in this slot.
- The left half of chassis slot position 2 is used for Hardware Multiply/Divide Option (M61-107) or a 7" I/O controller. The right half of chassis slot position 2 is used for the Display Controller (M61-102), the Automatic Load Option (M61-103), the combination Display Controller Automatic Load Option (M61-104) or a 7" I/O controller. If none of the above mentioned processor options are used in either the left or right half of the slot, a 15" I/O controller of Selector Channel (M70-103) may be used.
- 2 Selector Channels (M70-103) are supportable in chassis slot positions 2 and 0.
- The Memory Bus does not extend to Expansion Chassis (M49-020) from the 6/16 Processor Chassis. Only Multiplexor or Selector Channel Buses can be extended to the Expansion Chassis.
- Power supply is furnished for Processor Chassis only. Select expansion power by performing a power balance.
- The integral power supply of the 6/16 Processor with MOS Memory does not produce any +16 or -16 volts. Therefore, the following controllers cannot be used in the processor chassis, but must be used with an externally mounted power supply (M49-024 or M49-026) and an Expansion Chassis (M49-020).
 - M47-000 201 Data Set Adapter
 - M47-001 301 Data Set Adapter
 - M10-022 801 Automatic Dual Unit Controller

- Binary Display Panel (M71-101) or Hexadecimal Display Panel (M71-102) are optional.
- The Direct Memory Access Bus which is generated by either the Direct Memory Access Buffer (M73-103) or the Memory Access and Protect Controller (M73-104) Supports seven ports for either Extended Selector Channels (M73-105) or local Memory Bank Interfaces (M73-106).
- Group 1 area in the processor chassis is dedicated to their Processor boards with slot 4 to be used for optional DMAB (M73-103) or MAC (M73-104).
- Group 2 area in the processor chassis is used for memory or I/O boards but not extended selector Channels (M73-105).
- Group 3 area in the processor chassis is used for I/O or Extended Selector Channels (M73-105).
- Group 4 area in the processor chassis is dedicated to I/O or Extended Selector Channels (M73-105).
- For configurations with memory requirements larger than 256KB, one Local Memory Bank Interface (M73-106) must be added for each bank of additional 256KB. Capability for the first 256KB is provided in the basic processor.
- The Multiplexer Bus supports 16 I/O loads with 7" or 15" device controllers.
- The display panel constitutes one Multiplexer Bus load.
- Power supply furnished with processor supports processor only. It is Recommended than an Expansion Power Supply be added to furnish adequate power for peripheral controllers and interfaces.

- Binary Display Panel (M71-101) or Hexadecimal Display Panel (M71-102) are optional.
- The Direct Memory Access Bus which is generated by either the Direct Memory Access Buffer (M73-103) or the Memory Access and Protect Controller (M73-104) Supports seven parts for either extended Selector Channels (M73-105) or local Memory Bank Interfaces (M73-106).
- Group 1 area in the processor chassis is dedicated to their Processor boards with slot 4 to be used for optional DMAB (M73-103) or MAC (M73-104).
- Group 2 area in the processor chassis is used for memory or I/O boards but not Extended Selector Channels (M73-105).
- Group 3 area in the processor chassis is used for I/O or Extended Selector Channels (M73-105).
- Group 4 area in the processor chassis is dedicated to I/O or Extended Selector Channels (M73-105).
- For configurations with memory requirements larger than 256KB, one Local Memory Bank Interface (M73-106) must be added for each bank of additional 256KB. Capability for the first 256KB is provided in the basic processor.
- The Multiplexer Bus supports 16 I/O loads with 7" or 15" device controllers.
- The display panel constitutes one Multiplexer Bus load.
- Power supply furnished with processor supports processor only. It is Recommended that an expansion power supply be added to furnish adequate power for periper controllers and interfaces.

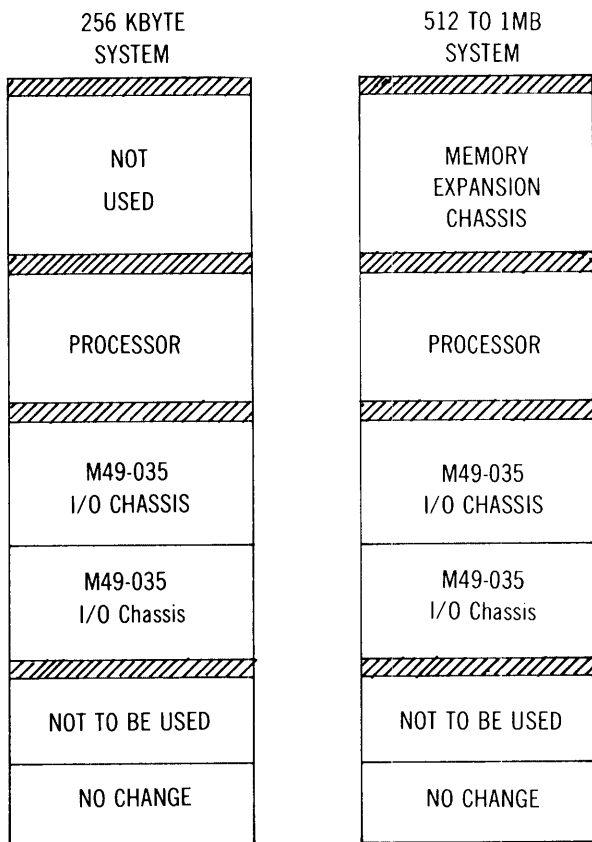

NOTE:

ESELCH — Extended Selector Channel
 MAC — Memory Access and Protect Controller
 DMAB— Direct Memory Access Buffer
 KB — One Thousand Bytes

8/32-C CONFIGURATION RULES

The following has been so defined to simplify configuration rules and to provide one set of rules independent of memory configuration.

1. The Processor Multiplexor is capable of driving fourteen loads (not including built-in TTY and Display Interface). The overall length of the bus is not to exceed a 36 inch cable, sixteen copper slots, plus a five inch waterfall cable.
2. The EDMA bus is capable of driving seven loads. The overall length of the bus is not to exceed 8 feet (includes all cables and copper).
3. With the Basic 8/32C Expansion chassis the I/O slots have been defined as follows:
 - (a) The connector 1 side is reserved for private I/O only.
 - (b) The connector 0 side may contain half-board I/O ESELCH, or Mux Bus Buffer.
4. The Processor Mux Bus must be contiguous. Avoid stubs at all times.
5. No I/O devices can be configured within the 8/32C Processor Cabinet.
6. Power requirements of the 8/32C dictates the use of a 48 Amp AC service. This service must be provided via a Hubbel Type 2710 (NEMA type L/4-30R) Receptacle.
7. The addition of either High Performance Floating Point (M83-111) and/or Writable Control Store (M83-108) to a basic (128KB or 1MB) CPU requires one additional 50 amp supply to support these options.

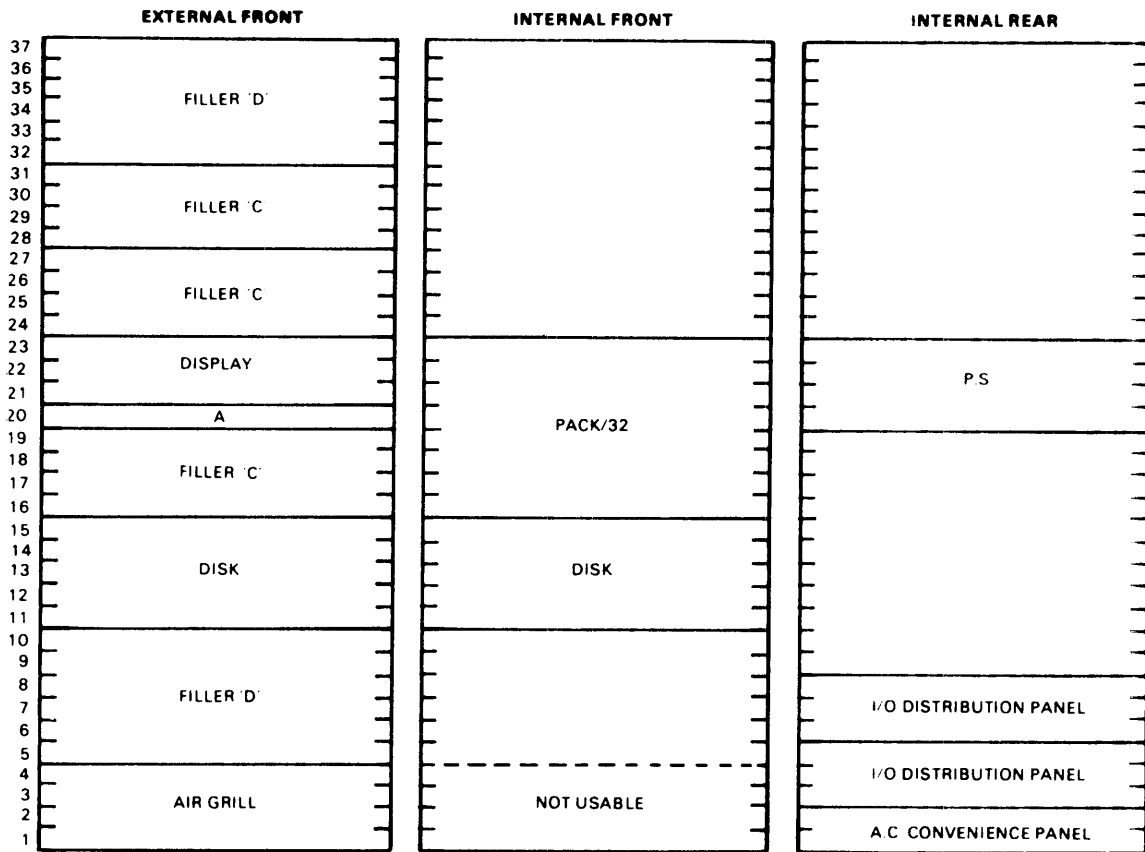

8/32D CONFIGURATION RULES

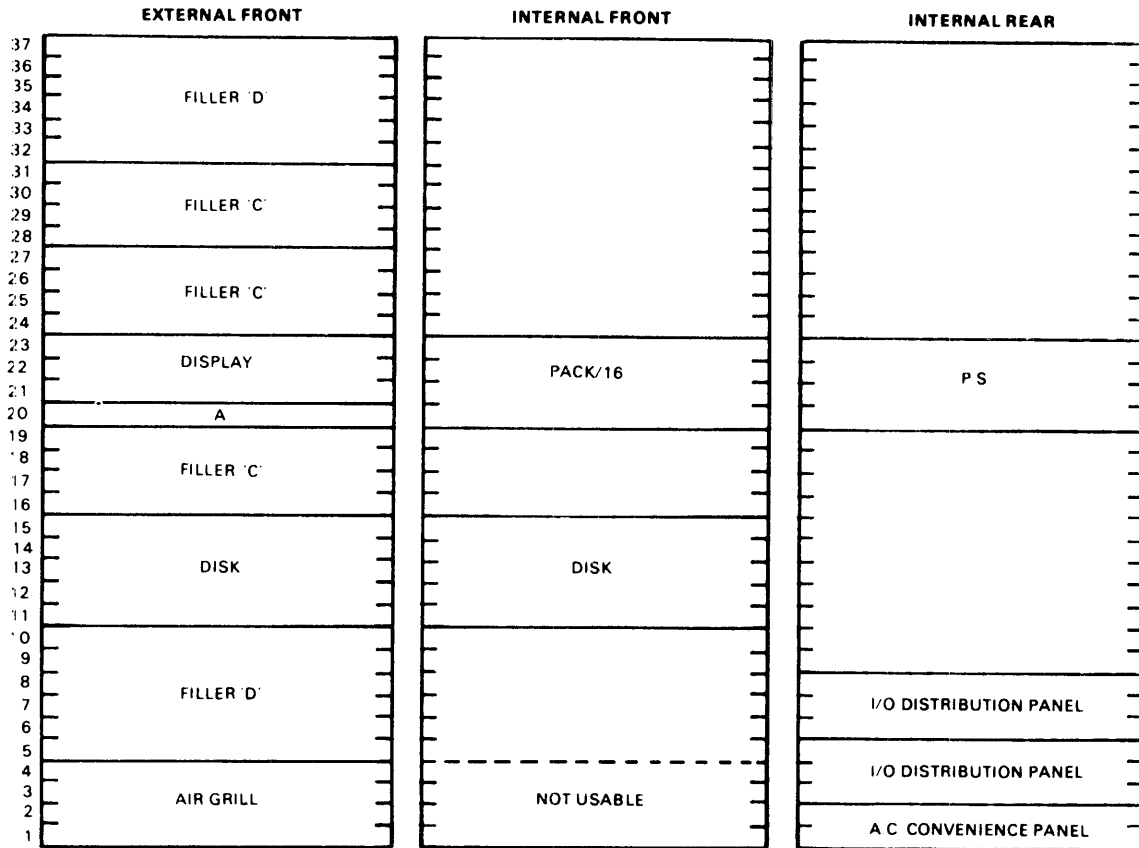

The following has been so defined to simplify configuration rules and to provide one set of rules independent of memory configuration.

1. The Processor Multiplexer is capable of driving fourteen loads (not including built-in TTY and Display Interface). The overall length of the bus is not to exceed a 36 inch cable, sixteen copper slots, plus a five inch waterfall cable.
2. The EDMA bus is capable of driving seven loads. The overall length of the bus is not to exceed 8 feet (includes all cables and copper).
3. With the Basic 8/32D Expansion chassis the I/O slot have been defined as follows:
 - (a) The connector 1 side reserved for private I/O only.
 - (b) The connector 0 side may contain half-board I/O, ESELCH, or Mus Bus Buffer.
4. The Processor Mux Bus must be contiguous. Avoid stubs at all times.
5. No I/O devices can be configured within the 8/32D Processor Cabinet.
6. Power requirements of the 8/32D dictates the use of a 48 Amp AC Service. This service must be provided via a hubbel type 2710 (NEMA Type L/4-30R). Receptacle.
7. The addition of either high performance floating point (M83-111) and/or Writable Control Store (M83-108) to a basic (256KB or 1MB) CPU requires one additional 50 Amp supply to support these options.

MOUNTING UNITS (ONE MU = 1 3/4")

MOUNTING UNITS (ONE MU = 1 3/4")

SECTION III SOFTWARE

GENERAL

INTRODUCTION

This section of the price list is a catalog of INTERDATA standard products, and related services. Requests for software, and services not listed in this price list should be referred to the local INTERDATA Sales Office.

The products in this section are arranged in specific classes for ease of reference: operating systems, languages, utilities, service routines and hardware test program packages.

INTERDATA software is provided on a large variety of media including cassette, paper tape, magnetic tape, card and disc.

SOFTWARE CLASSIFICATIONS AND SUPPORT

INTERDATA software is provided in three basic categories.

Category I — Fully Supported

Includes all software listed in the software section of the current price book and is available with complete warranty and revision control. The products in this category will be considered for enhancements and will be fully maintained. Software in the category will be covered by the Software Update Service for the stated fee. Category I Software may be re-classified by INTERDATA and notification of such changes will be made in the Software Subscription Service (SSS).

Category II — Limited Support

Software in this category will be maintained by Interdata on a "Best Effort" basis. Software in this category may include previous revisions of Interdata software packages.

Category III — Unsupported

This software is unsupported. It may be comprised of user programs found in the INTERDATA users group, old revisions of standard software, or obsolete programs. INTERDATA assumes no responsibility for software in this category. No warranty to support will be provided.

INTERDATA's policy of thorough supporting documentation allows easy implementation of its software products. In addition, for the more complex products, INTERDATA offers installation service packages for a fixed fee. Where an installation package has not been offered, you may request an installation service quotation via your local INTERDATA Sales Office.

Beyond installation and warranty requirements, INTERDATA will provide additional on-site support when and where requested. Charges for additional support are based on actual costs for travel and expenses plus a fixed time and material rate. Arrangements for professional software assistance may be made by contacting your local INTERDATA Sales Office.

INTERDATA's software undergoes rigorous testing before it is released, however due to the myriad of application possibilities some problems may be encountered, in such instances INTERDATA's Software Operations Group will respond. A Software Change Request (SCR) may be submitted at any time and INTERDATA will use its best efforts to provide a feasible solution or alternative. An ample supply of Software Change Request (SCR) forms are shipped with every system. Additional SCR forms may be obtained from your local INTERDATA Sales Office.

On a contract basis INTERDATA provides applications software, partial turnkey to complete turnkey systems. Arrangements to discuss your needs may be made by contacting you local INTERDATA Sales Office.

SOFTWARE WARRANTY

Each Category I software program shall conform to the then current published documentation applicable to such program when the program is delivered to the customer, and INTERDATA warrants that its Category I Software Product will be free from defects and non-conformance to such documentation in conformance with the following:

For a period of 90 days from the date of delivery (or installation where applicable) of Category I Software, purchased by a customer, INTERDATA will upon notice from the customer via software Change Request documentaing the symptoms of the fault, expend its best efforts to resolve software bugs and/or faults. This service shall be without extra charge and at INTERDATA's sole option may include on-site visit(s) if in its opinion the conditions justify such visit(s).

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING USE AND MERCHANTABILITY, AND OF ALL OTHER OBLIGATIONS OR LIABILITIES ON THE PART OF INTERDATA, AND INTERDATA NEITHER ASSUMES NOR AUTHORIZED ANY OTHER PERSON TO ASSUME FOR IT ANY OTHER LIABILITY IN CONNECTION WITH ITS PRODUCTS. INTERDATA MAKES NO WARRANTY WHATSOEVER IN RESPECT TO STANDARD SOFTWARE PRODUCTS MODIFIED BY THE CUSTOMER NOR FOR ANY SOFTWARE NOT SUPPLIED BY INTERDATA. INTERDATA SHALL HAVE NO LIABILITY WHATSOEVER FOR SPECIAL CONSEQUENTIAL OR PUNITIVE DAMAGES OF ANY KIND FROM ANY CAUSE ARISING OUT OF THE SALE, INSTALLATION, OR USE OF ITS PRODUCTS WHETHER OR NOT SUPPLIED BY INTERDATA OR FOR USE IN ANY MANNER NOT CONSISTENT WITH THE CATEGORY I DESCRIPTION FOR THE SOFTWARE.

DISTRIBUTION POLICY

INTERDATA manuals and program documentation (software) include features considered by INTERDATA to be of a proprietary nature and include INTERDATA trade secrets. Therefore, INTERDATA considers and Buyer agrees that the supply of such material, whether purchased or supplied free of charge, are intended solely for use in operation, maintenance, repair of INTERDATA equipment or for the evaluation of proposals by potential customers of INTERDATA or Buyer's customers. No right of reproduction is implied. Buyer agrees to pass this understanding on to his customer(s).

PRODUCT CONFIGURATION AND PACKAGING

Specific references are made to minimum hardware configuration requirements. These requirements are based on the size required by the basic package and do not necessarily include additional space for utilities, etc., which may be included in the package. Also, any minimal peripherals or auxiliary hardware requirements have been identified.

INTERDATA software packages are always shipped at the latest revision and update level in production.

Where appropriate, e.g. operating systems, standard hardware products supported by the software package have been listed.

Except as noted, source code is not furnished.

Note: Card readers are for source only and cannot be used for binary input.

COMPUTER CENTER SERVICE

INTERDATA maintains Computer Centers in various locations throughout the United States, Canada and overseas locations. These facilities may be available for customer use either in a self-operating environment or for INTERDATA processing of appropriate assemblies, etc. These facilities are offered on a fee basis. Arrangements for Computer Center time should be made through your local INTERDATA Sales Office.

INTERDATA USER GROUP

An additional source of software is the INTERDATA User Group INTERCHANGE. Additional information about INTERCHANGE is available from your local INTERDATA Sales Office.

SOFTWARE INSTALLATION

Software installation is included as part of the software price for certain packages as indicated. Installation is available for other packages upon quote by INTERDATA's Customer Service Department.

OS/32 MULTI-TASK OPERATING SYSTEM—OS/32MT

OS/32MT is a high performance real time operating system for INTERDATA 32-bit computers. The operating system provides a multi-tasking environment to support event-driven user application systems in real time, with up to 255 levels of task priority available. Concurrent batch oriented background processing is supported.

The operating system is responsible for all system resource management. Processor access is provided to tasks on a strict user-defined priority basis. Memory space is allocated automatically to tasks, which can be fixed in memory to ensure rapid response or can be disc resident. Task priority and residency are dynamically changeable as the situation or mode of operation demands.

The Input/Output system provides a device independent interface to user tasks, which need not concern themselves with the actual physical characteristics of the assigned devices or files. Dynamic reassignment of logical units is provided. A priority based queueing mechanism maximizes the throughput of high priority tasks while maintaining the integrity of any low priority I/O.

The File Manager provides comprehensive data storage and retrieval facilities. Files are accessed randomly or sequentially. Allocation and recovery of disc space is automatic and on-line expansion of user file space is provided. The file manager also administers all access of devices or files by user tasks, providing protection keys at the file level and dynamic protection through access privileges established at open time. All files and devices are referenced by name for ease of operator interface.

Included with the purchase of the OS/32 MT software package is a one year subscription to the Software Subscription Service.

The first copy of OS/32 MT includes installation at customer site. Installation is composed of system generation (on site or at an Interdata facility) and up to three days of on-site support of the installed OS/32MT. Installation applies to standard Interdata supported products only. For subsequent copies of OS/32 MT, for use at the same location, installation may be deleted at a price reduction of \$2500.

MINIMUM HARDWARE:

Model 7/32 or 8/32 Processor
128KB Memory
Display Panel (Binary or Hex)
Power Fail/Auto Restart
Memory Access Controller
Operator Command Console (Note: If operator command console is a CRT then a binary input device or a Loader Storage Unit with an appropriate loader program is required for system bootstrap).
Universal Clock
Magnetic Media (Cassette, 9 Track Magnetic Tape, or 10 MB Disc)

SUPPORTED INTERDATA HARDWARE:

8 Line Interrupt Module
Line Printers (60-600 lpm)
Card Reader (400 or 1000 cpm)
Paper Tape Reader/Punch
Cassette
Magnetic Tapes (9 Track 800 and 1600 BPI)
Discs (2.5M Byte, 10MB, 40MB and MSM80, MSM300 storage module)
Video Display (20 ma PASLA/PALS)
TTY Interface
Loader Storage Unit
Carousel 30, 35, 300
Mini Input/Output System
Digital Multiplexor
Note: OS/32 MT does not support peripheral devices interfaced with 10" device controllers.

Program Number	OS/32 MULTI TASKING OPERATING SYSTEM PACKAGE Includes the following items:	SOURCE	OBJECT
07-058	MT System Module Library	X	X

*Drivers for this program include TTY, Card Reader, Paper Tape Reader/Punch Line Printer, Cassette, 9 Track Magnetic Tape, and Disc.

ORDER NUMBERS

- S90-006-99 OS/32 MT Software Documentation Package.
- S90-006-31 OS/32 MT Source and Object Magnetic Tape (9 Track 800 CPI) and Documentation Package.
- S90-006-71 OS/32 MT Source and Object Magnetic Tape (9 Track 1600 CPI) and Documentation Package.
- S90-006-61 OS/32 MT Source and Object Disc (10 MB) and Documentation Package.
- S90-006-91 OS/32 MT Source Listings. This package contains a complete set of listings for all programs supplied in the S90-006 Package. Available only to customers who have purchased OS/32 MT.

INTERDATA TELECOMMUNICATION ACCESS METHOD—ITAM/32

ITAM is the INTERDATA Telecommunications Access Method. ITAM provides a software interface between a user task under OS/32MT and a wide variety of communication terminals (or computers) via communications facilities such as modems, null modems and the telephone utility.

Two basic methods are provided. The first is for the user who does not want to consider communication protocols, routines, etc. and simply wants to add data communications to his system. For this user, a READ/Write device independent method is provided; i.e., the user task communications with devices as though they were local peripherals. This procedure is fully compatible with the I/O calls (SVC's) associated with non-communication devices. A user task is thus able to communicate with local and remote devices in the same device independent manner.

The second method of access is for the user who wants to configure his own data communications system. The modular structure of this method of access allows the data communication user task under OS/32MT to interface any communications facility with minimum special effort. This method provides a set of standard conventions for implementing communications protocols, procedures, etc., and allows for the resultant I/O transfers to take place with a minimum of system overhead.

Current support of the bit stuffing protocols is provided at this second method of access. A user task is able to structure routines which can communicate via HDLC, ADCCP or SDLC, making a wide array of terminals and processor systems accessible.

Included with the current release of ITAM is an additional task called "2780/3780 Emulator Task". This task provides a convenient user interface and reduces the remote job entry function to a few simple console commands.

A prerequisite for ITAM is OS/32MT (R01 or later revision).

SUPPORTED INTERDATA HARDWARE: NOTE: ITAM/32 does not support peripheral devices interfaced with 10" device controllers.

DEVICE DEPENDENT: ITAM Provides line driver support for any BYSYNC, ASYNCH or ASCII class of terminals or computer via PALS, PASLA, 201 DSA or QSA. Line driver support of the bit oriented protocols is provided via the QSA (ZBID version) and the High Speed Data Handling option.

DEVICE INDEPENDENT: ITAM supports, via the RS232 PALS or PASLA, Model 33 and 35 Teletypes, Carousel 300, Non Editing CRT's and the Graphic Display. ITAM supports another comparable equipped remote INTERDATA System via a 201 or QSA interface. Finally ITAM provides point to point communication with an IBM System 360/370 where the INTERDATA system emulates the 2780/3780 terminal.

Program Number	INTERDATA TELECOMMUNICATIONS ACCESS METHOD PACKAGE Includes the following items:	SOURCE	OBJECT
07-069F01-F02	ITAM System Module Library	X	X
07-070F01-F12	ITAM Driver/Terminal Manager Library	X	X
03-093	2780/3780 RJE Emulator Task		X

HOUSTON AUTO-SPOOLING PRIORITY—HASP/32

HASP/32 is the HASP Multileaving Workstation Emulator Task. This task allows appropriately equipped INTERDATA 32-bit systems to emulate the popular IBM HASP workstation. The HASP workstation is a Remote Job Entry (RJE) terminal permitting users at a remote location to submit batch jobs which are transmitted over a binary Synchronous communication line to a central site for processing with results returned to the remote site.

HASP/32 can support multiple card readers (up to seven), multiple printers (up to seven), a console and a binary synchronous communication line. Although INTERDATA does not support punch card equipment, HASP/32 accepts printer or punch streams which may be transmitted by an IBM 360/370. Job streams designating a card punch are automatically outputted in 80-column format to a line printer. The HASP multileaving communication technique is used to allow all card readers and printers to operate concurrently. Multileaving is a communication technique providing pseudo-simultaneous bi-directional data transmission with significantly high throughput than the standard BYSYNC communication protocol used for RJE terminals such as IBM 2780's and 3780's.

The central host computer can be either an IBM 360/370 system supporting HASP workstations or another computer system which emulates the standard host. HASP/32 can also be used to provide processor-to-processor communications between two INTERDATA systems operating in a master/slave mode. The master and slave computers can multiplex up to seven data streams in each direction over a single communication line via HASP/32 facilities. The INTERDATA system does not execute IBM Job Control Language (JCL) or support Remote Job Execution.

HASP/32 operates under OS/32MT and ITAM/32. Prerequisites for HASP/32 are OS/32MT (R02 or later revision), ITAM/32 (R01 or later revision), WITH THE BYSYNC line driver. HASP/32 executes concurrently with other tasks in this environment and does not seriously effect system throughput.

Included with the purchase of HASP/32 is on-site software installation by INTERDATA Customer Software. Installation consists of HASP 32 system generation and demonstration that HASP/32 performs as specified with communication and host computer facilities acceptable to INTERDATA.

Supported INTERDATA Hardware

HASP/32 can access the full complement of peripherals supported by OS/32MT. Facilities are provided to use these devices in flexible, device independent manner.

An appropriate Synchronous Data Set Adapter is required to interface OS/32MT to the data set. Currently supported devices include a 201 Data Set Adapter and the Quad Synchronous Adapter. Maximum transmission speed with a 201 DSA is 9600 baud, and with QSA is 19.2K baud. HASP/32 uses the ITAM/32 SVC 15 facility and requires that the OS be configured with only the BISO SYNC line driver. If ITAM processor-to-processor communications is also required, the BISO SYNC Terminal Manager should be included.

Program Number	HASP/32 SOFTWARE Includes the following item:	OBJECT

OS/16 MULTI-TASK OPERATING SYSTEM — OS/16MT2

OS/16MT2 is a Real-Time, Multi-Tasking Operating System for INTERDATA 16-bit computers that is generally compatible with OS/32MT. It provides a multi-tasking environment that is particularly valuable for event driven, real-time user application programs. Up to 255 levels of task priority are available. Concurrent, batch oriented, background processing on-line program development facilities, are provided.

The operating system handles all system resource management. Processor access is provided to tasks on a strict user-defined priority basis, with real-time tasks startable from a console terminal or under program control. OS/16MT2 provides complete supervisory services for Background partition and Foreground Task, Task Common, and Resident Library Memory partitions.

Included with the purchase of the OS/16MT2 software package is one a year subscription to the Software Subscription Service.

NOTE: A Sysgen Service is available for those customers whose hardware configuration does not support a source sysgen. (See page 51).

MINIMUM OPERATIONAL HARDWARE

Current INTERDATA 16-bit Processor

32KB of Memory

Display Panel (Binary or Hex)

Operator Command Console (Carousel, TTY or CRT) Note: If the operator Command Console does not include paper tape support and 16MT2 is disc based, then a binary input device (Paper Tape Reader, 9 Track Magnetic Tape, Cassette or a Loader Storage/Automatic Load Option with its appropriate loader program is required for system bootstrap.

Magnetic Media (Cassette, 9 Track Magnetic Tape, 2.5 or 10MB Disc)

MINIMUM HARDWARE FOR SOURCE SYSGEN

Current INTERDATA 16-bit Processor

64KB of Memory

Display Panel (Binary or Hex)

Operator Command Console (Carousel, TTY or CRT) Note: If the operator Command Console does not include paper tape support and 16MT2 is disc based, then a binary input device (Paper Tape Reader, 9 Track Magnetic Tape, Cassette) or a Loader Storage/Automatic Load Option with its appropriate loader program is required for system bootstrap.

For a Disc Based System you need:

Note: If the operator Command Console does not include paper tape support and 16MT2 is disc based, then a binary input device (Paper Tape Reader, 9 Track Magnetic Tape. Cassette) or a Loader Storage/Automatic Load Option with its appropriate loader program is required for system bootstrap.
Disc Drive (2.5 or 10 MB)

For a Non-Disc System you need one device from each of Groups A, B, C.

Device Group A

Paper Tape Punch
9 Track Magnetic Tape
Cassette
TTY or Carousel

Device Group B

Card Reader
9 Track Magnetic Tape
Cassette

Device Group C

Paper Tape Punch
9 Track Magnetic Tape
Cassette

Note: The INTERDATA Cassette system can be counted as a device in each of any two device groups. The third device must be either a card reader or 9 track magnetic tape.

SUPPORTED INTERDATA HARDWARE

Note: OS/16MT2 does not support peripheral devices that are interfaced with 10" device controllers.

Power Fail-Auto Restart
Universal Clock
Line Printers (60 to 600 L.P.M.)
Card Reader (400 or 1000)
Paper Tape Reader/Punch
Cassette
Magnetic Tape (7 and 9 Track)
Disc (2.5MB, 10MB, 40 MB and MSM80, MSM 300 storage modules)
Mini Input/Output System
TTY
Carousel 30, 35, 300
Video Display (20ma and PASLA/PALS)
8 Line Interrupt Module

ORDER NUMBER

- S90-010-99 OS/16MT2 Software Documentation Package.
- S90-010-26 OS/16MT2 Object Cassette and Documentation Package.
- S90-010-36 OS/16MT2 Source and Object Magnetic Tape (9 Track 800 CPI)* and Documentation Package.
- S90-010-76 OS/16MT2 Source and Object Magnetic Tape (9 Track 1600 CPI)* and Documentation Package.
- S90-010-46 OS/16MT2 Source Cards. This package contains source cards of the OS/16MT2 Modules and Drivers and must be purchased with S90-010-26,36, 56, 66, or 76.
- S90-010-56 OS/16MT2 Source and Object Disc (2.5MB) and Documentation Package.
- S90-010-66 OS/16MT2 Source and Object Disc (10MB and Documentation Package.
- S90-010-96 OS/16MT2 Source Listings. This package contains a complete set of listings for all programs supplied in the S90-010 Package.
- S90-010-86 OS/16MT2 Source and Object Floppy Disc. and Documentation Package.

Note: It is recommended that a customer with disc systems buy the OS/16MT2 package on disc.

INSTALLATION

- S90-905 OS/16MT2 OPERATING SYSTEM INSTALLATION—
Installation is composed of system generation (on-site or at an INTERDATA facility (at INTERDATA's option) with up to three days of on-site support for installation of OS/16MT2. Installation applies to standard INTERDATA supported products only.

IN-HOUSE SYSGEN

In order to satisfy user needs, Interdata will produce at an Interdata facility, a sysgen of OS/16MT2 based on the customers system. This facility will not cover the inclusion of user written drivers, and OS/16MT2 must have already been purchased. This service will assist the user who needs a system but lacks the minimum hardware requirement for a sysgen.

- S90-012-56 OS/16MT2 Custom Sysgen Disc (2.5MB) and Documentation Package.
- S90-012-66 OS/16MT2 Custom Sysgen Disc (10MB)and Documentation Package.

NOTE: Additional sysgens necessitated by errors in customer supplied parameters will require repurchase of sysgen service at above prices.

INTERDATA TELECOMMUNICATION ACCESS METHOD — ITAM/16

ITAM/16 is the INTERDATA Telecommunications Access Method for INTERDATA 16-bit processors. ITAM/16 provides a software interface between a user task under OS/16MT2 and a wide variety of communications facilities such as modems, null modems and the telephone utility.

ITAM/16 supplies, for the user who does not want to consider communication protocols, routines which provide the means of adding communication capabilities to his system. Using simple Read/Write commands, the user task reads and writes to the communication device as though it were a directly connected local peripheral. This method is fully compatible with the I/O calls (SVC's) associated with non-communication devices and allows the user task to control local and remote devices in an identical, device independent manner. Included with the current ITAM is an additional task called "2780/3780 Emulator Task". This task provides a convenient user interface and reduces the remote job entry function to a few simple console commands.

A prerequisite for ITAM/16 is OS/16MT2.

MINIMUM HARDWARE

- Current INTERDATA 16-bit Processors
- Display Panel (Binary or Hex)
- 32KB Memory
- Operator Command Console
- Line Frequency Clock
- Magnetic Media (Cassette, 9 Track 800 CPI Magnetic Tape, 2.5 or 10M Byte Disc)
- Appropriate Communication Line Adapters(s)

MINIMUM MEMORY RESIDENCY REQUIREMENTS

- OS/16MT2 (16KB Typical)
- plus 2KB for Asynchronous Support
- plus 10KB for Synchronous Support
- plus 5KB for RJE Emulator Task
- plus 200 bytes per device
- plus Buffer areas (user-specified)

SUPPORTED INTERDATA HARDWARE

ITAM/16 supports, via the RS232 PALS or PASLA, Model 33 and 35 Teletypes, Carousel 300, Non-editing CRT's and the Graphic Display. ITAM/16 supports another comparably equipped remote INTERDATA processor via a 201 Interface or a Quad Synchronous Adapter. Lastly, ITAM/16 provides point to point communication with an IBM 360/370 where the INTERDATA System emulates the 2780/3780 terminals.

BASIC OPERATING SYSTEM—BOSS-PLUS

BOSS-PLUS is a batch mode and program development oriented system, modularly organized to provide a flexible system that may be tailored to individual system needs. Input/ Output is controlled by the supervisor in a non-interrupt mode and features device independent program development capability. To facilitate batch mode operation, the system permits the user to accept system commands. A file management sub-system is included to support the creation of named files, automatic file expansion, record updates and variable length record usage. Multiply/Divide Floating point and List processing traps are provided.

To aid the user in development of applications tasks, several utility programs are supplied with the system. These utilities include an assembler (OS/ASSEMBLER), a text editor (OS/EDIT), an on-line debugger (OS/AIDS), a linking library loader, loader, general loader, a device to device copy utility (OS/COPY), and an OS source updater for manipulation of source files (OS/SOURCE UPDATER).

Included with the purchase of the BOSS software package is a one year subscription to the Software Subscription Service.

MINIMUM HARDWARE:

Current INTERDATA 16 Bit Processor
 8KB Memory
 Display Panel (Binary or Hex)
 Operator Command Console (Must be a TTY or CRT on a current loop interface) Note: If the operator command console is a CRT then a binary input device or a Loader Storage unit with an appropriate loader program is required for system bootstrap.
 Note: 24KB of Memory is required for BOSS Sysgen

SUPPORTED INTERDATA HARDWARE:

Line Printers (60-600LPM)
 Card Readers (400 or 1000 CPM)
 Paper Tape Reader/Punch
 Cassette
 Magnetic Tape (9 Track)
 Disc (2.5 and 10 MB)
 PASLA—Video Display
 ASR Interface

EXTENDED FORTRAN IV

The INTERDATA Extended FORTRAN IV 16-bit system is a higher level language which conforms to the ANSI FORTRAN STANDARD X3.9-1966. This system is designed for use with BOSS-PLUS, and OS/16MT2 operating systems. The relocatable compiler is a translator which reads source statements and converts them to machine operable object code. Extensive error checks are performed of the syntax during the compilation process. I/O is performed by reference to logical units to assure device independence with a wide range of acceptable source and object mediums. The run time library contains over 135 relocatable programs which consist of all Fortran Intrinsic and External functions described in the USASI X3.9-1966 standard plus routines required for I/O and execution of complex and 64-bit double precision arithmetic instructions. All programs in the run time library are reentrant, Operational extensions include mixed-mode arithmetic statements, implied DO-loops, array initializations and hexadecimal constants in DATA statements, multiple entry into user-written subroutines, Hollerith string declarations, implicit type declaration, error and end-of-file returns from Read/Write operations. Extended FORTRAN IV also supports real time processing according to the Purdue ISA standards.

MINIMUM HARDWARE:

Current INTERDATA 16-Bit Processor
Memory size dependent upon operating system plus 20 KB
Source Input Device or file.
Object Output device or file
List Output device or file.*
Error Output device or file.*

*Can be same: device or file.

FORTRAN V, LEVEL 1

FORTRAN V for 16-bit systems contains the full power of Extended FORTRAN IV and in addition, supports ISA Calls. The basic structure of FORTRAN V conforms to ANSI FORTRAN Standard X3.9-1966. This system is designed to be used with any INTERDATA 16-Bit operating system. The compiler accepts a mix of FORTRAN statements and in-line assembly code. The compiler generates an intermediate source text which is processed by the Common Assembler Language (CAL) assembler which performs statement level optimization. Included in the FORTRAN REPERTOIRE ARE MIXED MODE ARITHMETIC OPERATIONS IN—LINE Hollerith constants and data statements that allow array initialization, and implied-DO Loops, multiple entry subroutines and error and end of file returns from Read/Write operations. The PURDUE ISA Real-time extensions are included as well as bit and byte manipulation of integers including Inclusive OR, Logical Product, Logical Complement, Complement, Exclusive OR, Logical Shift, Bit Test, Byte Load and Store, Byte Clear and Byte Complement, which conform to the ISA standards. The Run Time Library contains over 200 relocatable programs which consist of all FORTRAN intrinsic and external functions described in the ANSI 3.9-1966 standard plus all routines required for the I/O and execution of complex and double precision (64-bit) arithmetic instructions. The Run Time Library routines are reentrant to minimize response time in the Real-Time environment. Extensive error checks are performed during the compilation and assembler processes with error flag notation on listings. Complete device independence is maintained with a wide range of input and output mediums available.

MINIMUM HARDWARE:

Current INTERDATA 16 Bit Processor.
Memory size dependent upon operating system plus 24 KB.
Source Input device or file.
Text Output device or file.

FORTRAN V — 32 BIT

32-Bit FORTRAN V contains the full power of Extended FORTRAN IV and in addition, supports ISA Calls. The basic structure of FORTRAN V conforms to ANSI FORTRAN Standard X3.9-1966. This system operates under OS/32 MT. The compiler accepts a mix of FORTRAN statements and in-line assembly code. The compiler generates an intermediate source text which is processed by the Common Assembler Language (CAL) assembler which performs statement level optimization. With the FORTRAN V system it is possible to have program and data sizes up to 1 megabyte. Included in the FORTRAN repertoire are mixed mode arithmetic operations in-line Hollerith constants and data statements that allow array initialization, and implied-DO Loops, multiple entry subroutines and error and end of file returns from Read/Write operations. The PURDUE ISA Real-time extensions are included as well as bit and byte manipulation of integers including Inclusive OR, Logical Product, Logical Complement, Exclusive OR, Logical Shift, Bit Test, Byte Load and Store, Byte Clear and Byte Complement, which conform to the ISA standards. The Run Time Library contains over 200 relocatable programs which consist of all FORTRAN intrinsic and external functions described in the ANSI 3.9-1966 standard plus all routines required for the I/O and execution of complex and double precision (64-bit) arithmetic instructions. The Run Time Library routines are re-entrant to minimize response time in the Real-Time environment. Extensive error checks are performed during the compilation and assembler processes with error flat notation on listings. Complete device independence is maintained with a wide range of input and output mediums available.

FORTRAN VI

FORTRAN VI features a block optimizing compiler which provides a superset of ANSI standard X3.9 - 1966 FORTRAN for the INTERDATA 32-Bit Computer Systems. The compiler is augmented by a comprehensive run time library of subprograms.

The compiler operates under OS/32MT in a minimum of 60KB of memory, and makes use of up to 100KB of disc memory for overlays and scratch files. The compiler outputs CAL assembly code targeted for 32-bit operation.

The FORTRAN VI language provides a rich superset of the ANSI standard, taking full advantage of the 32-bit computer architecture including the high performance floating point hardware.

The optimizations include subscript evaluation by linearization of multidimensional arrays, common index elimination, register allocation and in-line expansion of intrinsic functions.

The Run Time Library provides: a wide range of fast, accurate mathematical functions; language extensions to manipulate data types not part of FORTRAN itself (e.g., bits, bytes, lists); real-time extensions to provide multi-tasking event driven FORTRAN systems; and the input/output system to support the FORTRAN READ/WRITE and ENCODE/DECODE statements.

The product is supported by a thorough set of informative manuals.

MINIMUM HARDWARE

32-Bit Processor

Memory: 60KB over operating system for the compiler. Compiler operation requires minimum of 10KB OS/32 System Space.

Single and Double Precision Floating Point support (Hardware or Software traps).

Source input device or file

Text Output device or file

List output device or file

100KB of disc space for overlays and scratch files.

COBOL - SUBJECT TO INTERDATA LICENSING AGREEMENT

INTERDATA's COBOL provides the user with a powerful program development facility under the standard operating system OS/32MT. The structure of COBOL conforms to ANSI COBOL Standard X3.23 - 1974. The COBOL compiler includes both a language processor, and a Run Time Library, COBOL produces CAL, INTERDATA's Common Assembler Language. This facility provides for powerful debug capabilities and easy program modification. Complete device independence is provided for a wide range of input and output peripherals.

Packaged with COBOL, INTERDATA's ISAM is a complete file management system designed to meet the data processing requirements of a wide range of commercial applications.

BASIC LEVEL II

INTERDATA's Basic II is a powerful, easily learned interactive programming language that employs the conventions of Dartmouth's Basic and in addition has many significant new enhancements. Basic II is offered in CAL source which can be assembled only on 32 Bit Processors but can be targeted for 16 Bit Processors. Basic II will also be supplied in three object forms dependent on the type of processor and floating point requirements.

Because of Basic II's sophisticated file handling facilities and system requirements Basic II will only run under OS16MT2 or OS32MT. Under these operating systems Basic II can be easily established as a re-entrant library partition and shared by multiple users.

MINIMUM HARDWARE

Interdata 16 or 32 Bit Processor
20KB of Memory above operating system
Display Panel (Binary or Hex).

Program Number	BASIC LEVEL II Includes the following:	OBJECT
03-105	Basic Level II Interactive Interpreter	X

ORDER NUMBERS

S90-208-99 Basic Software Documentation Package.

16 Bit Processor

SINGLE PRECISION FLOATING POINT BASIC LEVEL II

S90-208-26 BASIC II Object Cassette and Documentation Package.
S90-208-36 BASIC II Object Magnetic Tape (9 Track 800 CPI) and Documentation Package.
S90-208-76 BASIC II Object Magnetic Tape (9 Track 1600 CPI) and Documentation Package.
S90-208-56 BASIC II Object Disc (2.5 MB) and Documentation Package.
S90-208-66 BASIC II Object Disc (10 MB) and Documentation Package.

S90-208-96 BASIC II 16 Bit Source Listing.
Must Be Purchased With Another Media.
S90-208-86 BASIC II Object Floppy Disc and Documentation Package

32 Bit Processor

SINGLE PRECISION FLOATING POINT BASIC LEVEL II

S90-211-21 BASIC II Object Cassette and Documentation Package.
S90-211-31 BASIC II Object Magnetic Tape (9 Track 800 CPI) and Documentation Package.
S90-211-71 BASIC II Object Magnetic Tape (9 Track 1600 CPI) and Documentation Package.
S90-211-51 BASIC II Object Disc (2.5 MB) and Documentation Package.
S90-211-61 BASIC II Object Disc (10 MB) and Documentation Package.
S90-211-91 BASIC II 32 Bit Source Listing
Must Be Purchased With Another Media.

32 Bit Processor

DOUBLE PRECISION FLOATING POINT BASIC LEVEL II

S90-210-21 BASIC II Object Cassette and Documentation Package.
S90-210-31 BASIC II Object Magnetic Tape (9 Track 800 CPI) and Documentation Package.
S90-210-71 BASIC II Object Magnetic Tape (9 Track 1600 CPI) and Documentation Package.
S90-210-51 BASIC II Object Disc (2.5 MB) and Documentation Package.
S90-210-61 BASIC II Object Disc (10 MB) and Documentation Package.

S90-210-91 BASIC II 32 Bit Source Listing
Must Be Purchased With Another Media.

Note: Requires OS/32 MT Revision 2 or higher.

SOURCE PACKAGES

S90-208-39 BASIC II Source Magnetic Tape (9 Track 800 CPI) and Documentation Package.
S90-208-79 BASIC II Source Magnetic Tape (9 Track 1600 CPI) and Documentation Package.
S90-208-59 BASIC II Source Disc (2.5 MB) and Documentation Package.
S90-208-69 BASIC II Source Disc (10 MB) and Documentation Package.

Note: 1. BASIC II Source produces both single and double precision floating point versions for either 16-bit or 32-bit processors.
BASIC II cannot be assembled on 16-Bit processor.
2. If two packages are purchased on the same media, at the same time, the second package will be discounted by fifty percent.

Source is not discountable.

CAL MACRO PROCESSOR AND LIBRARY

The CAL MACRO Processor provides efficiency and standardization to the user of CAL Assembler Language. It allows commonly used sequences of assembly language instructions to be defined once, and then made available on the CAL MARCO Library to be called by the use of a single statement. Additional capabilities of the CAL MACRO Processor are positional or keyword macro prototypes, nested macros, variable operation codes, operand sublists and conditional macro expansion.

The system MACRO Library provides the user of the CAL MACRO Processor with a variety of standard macro definitions. These macro definitions provide a broad spectrum of capabilities that enable the user to perform routine functions by calling the appropriate macro from the System MACRO Library. The MACRO Library Utility is used to catalog and modify a MACRO Library as required. Note: CAL is a prerequisite.

MINIMUM HARDWARE:

- Current Interdata Processors.
- Memory Size 24KB plus Operating System
- Input file or device.
- Output file or device.
- Error file or device.
- Display Panel (Binary or Hex).

Program Number	CAL MACRO PROCESSOR AND LIBRARY SOFTWARE Includes the following items:	SOURCE	OBJECT
03-084	CAL Macro Processor		X
03-083	Macro Library Utility Program		X
07-068F01	System MACRO Library (Sequential Access Format)	X	
07-068F02	System MACRO Library (Direct Access Format)	X	
03-066	Common Assembler Language		X

COMMON ASSEMBLER LANGUAGE—CAL

CAL is a comprehensive assembler which may be used with 16 and 32 bit INTERDATA processors. CAL is designed to operate in conjunction with any INTERDATA operating system. A great deal of flexibility is built into the assembler to allow absolute and relocatable object code, flexibility in field formatting and at the same time maintaining line orientation and providing re-entrant object code to be used with a 32-bit processor. A fully annotated cross reference of symbolic and error references is provided. The versatility of CAL also allows 8 character alphanumeric symbols. In addition, a set of 72 pseudo-operations are available to the user. FORTRAN common block definition and initialization are also provided. The assembler functions in a multiple pass environment with the multiple passes allowing the option to "squeeze" (optimize) the code to produce the shortest form possible for the instructions.

MINIMUM HARDWARE

Current Interdata Processors
 Memory size required is 24KB plus space for operating system and symbol tables.

CAL SOURCE for 16 or 32 Bit Processors

- S90-204-39 CAL Source Magnetic Tape (9 Track 800 CPI) and Documentation Package.
- S90-204-79 CAL Source Magnetic Tape (9 Track 1600 CPI) and Documentation Package.

STAND-ALONE SOFTWARE PACKAGE—SAS

The SAS package provides the basic utility tools for off-line program development. A complete set of facilities are provided which include an assembler, debug routine, editing capability this package support teletypewriter/CRT and paper tape IO devices with the assembler additionally supporting a card reader. The cassette and magnetic tape I/O devices are supported using the relocatable or general loader. Absolute and relocatable programs are easily accommodated as is the resolution of symbolic inter-program linkage. This package is used only with 16-bit INTERDATA processors.

MINIMUM HARDWARE:

Current INTERDATA Processors
8KB Memory
Display Panel (Binary or Hex)
TTY

ORDER NUMBERS

S90-400-99 SAS Software Documentation Package.
S90-400-16 SAS Object Paper Tape and Documentation Package.

The SAS Package (S90-400-16) will be furnished free of charge with each 16-bit processor provided it is on the same order with the processor and identified as a no charge item.

WCS DEVELOPMENT PACKAGE—RUNS UNDER OS/32MT

This package provides the information and development programs required for users to define, implement, and test microcode programs for the Writable Control Store (WCS) option to the Model 8/32 Processor. The manuals define the micro-instruction set of the machine, and present some guidance as to its use. The micro-assembler (MICROCAL) allows writing of microprograms in symbolic form, and the Writable Control Store Support Program provides a means of loading, debugging, and controlling the microprogram in WCS.

MINIMUM HARDWARE:

Model 8/32 with WCS
128 KB
TTY

Program Number	WCS DEVELOPMENT PACKAGE SOFTWARE Includes the following:	OBJECT

S90-406-61 Object Disc (10 MB) and Documentation Package.
S90-406-99 Documentation and Manuals.

LOADER STORAGE UNIT SUPPORT PROGRAM—LSUP

The Loader Storage Unit Support Program facilitates the generation of source information for the individual storage units and the testing of an operating Loader Storage Unit. This program is an absolute stand-alone program which operates in one of the three phases. The Specification phase accepts an object tape produced by the user assembler as input, and produces a punched paper tape (which is used for writing PROMs) and/or a listing specifying the data to be written into LSU PROMs. The Verification phase verifies the data tape produced in the Specification phase by comparing it against the object tape, and indicates any possible compare failure. The Test Phase checks the correctness of the data contained in LSU ROMs and tests the operation of the LSU.

MINIMUM HARDWARE:

Model 6/16, 7/32, or 8/32 Processor
8KB Memory
Display Panel (Binary or Hex)
Paper Tape Reader/Punch
TTY, CRT, CAROUSEL - Current Loop Interface

SORT/MERGE

The SORT/MERGE program provides users of INTERDATA Processors with disc or core based sorting and merging facilities for files of fixed length records. The program is controlled by commands entered from either an interactive or batch entered device, and performs two distinct functions:

- 1) a SORT, which arranges a file of fixed length records into an ascending or descending sequence determined by up to 6 user-specified keys; and
- 2) a MERGE, which produces a sorted file from two files that have previously been sorted.

In this context, a key is an ASCII character string which has a definite position and length within each record. Sort/Merge runs in 10KB of memory and utilizes all available memory before using disc scratch space.

MINIMUM SOFTWARE:

OS/16 MT2 or OS/32 MT

MINIMUM HARDWARE

Refer to OS/16MT2 or OS/32MT for Minimum Hardware requirements.

SOFTWARE ROUTINES

GENERAL

The programs contained in this section are used as replacements for sub-sections of the program packages offered in Section II through IV.

ORDERING FORMAT

This ordering format is applicable only to the software that is listed in this section.

The program number is used to order this software and must be suffixed with the appropriate media code. Care should be taken to insure that software ordered for 16-bit processors contains the 16-bit suffix code and software ordered for 32-bit processors contains the 32-bit suffix code. Refer to Table 1 to determine the appropriate media suffix code. When ordering on card media, the software must be in source format.

TABLE 1				
FIRST DIGIT (X)	MEDIUM	SECOND DIGIT (Y)	FORMAT	
1	Paper Tape	1	32-Bit Obj	
2	Cassette	6	16-Bit Obj	
3	9 Track 800 CPI Magnetic Tape	9	Source (Not available on Paper Tape)	
4	Card			
7	9 Track-1600 CPI Magnetic Tape			

Programs in this section are not available on disc.

Example: To order a replacement 03-064 OS/32 AIDS program on paper tape, the order number would be as follows:

PRICING

The programs listed in this section are available in source or object form (without documentation) and may be ordered by using the appropriate suffix code. INTERDATA assumes no liability for source code modifications implemented by the user. (Refer to Warranty Statement)

The price shown for individual programs in this section is a base price. The total price per program is the base price shown plus an adjustment factor, dependent upon media and format, as shown in the following table. When several separate programs are simultaneously ordered on cassette, magnetic tape or disc all programs will be loaded on a single media. The price adjustment will apply to only one program in these instances.

OBJECT FORMAT			SOURCE FORMAT	
Media	Suffix	Adjustment	Suffix	Adjustment
PAPER TAPE	11 or 16	None	19	Not Available
CASSETTE	21 or 26	None	29	\$50.
9 TRACK 800 CPI MAG. TAPE	31 or 36	None	39	\$50.
9 TRACK 1600 CPI	71 or 76	None	79	\$50.
CARD	Not Available	Not Available	49	\$75.

Program Format Number Description	PROGRAM DESCRIPTION	Base Price
03-025—Mxy	OS Assembler This assembler is used with 16 bit operating systems and allows the user to program in IBM-like symbolic language with a full range of conditional assembly options and mnemonics to produce object code programs. Error detection, multipass options and conditional listings are incorporated. For documentation order manual No. 29-230.	\$ 30.
03-030—Mxy	OS Library Loader This loader is used with 16-bit operating systems. Facilities are included to allow operator controller object file creation, search, additions and duplication. Automatic linking is provided to allow loading all library programs for any specific requirement. For documentation order Manual No. 29-231.	\$ 30.
03-053—Mxy	OS Automatic Interactive Debugging System OS AIDS (Automatic Interactive Debugging System) is a comprehensive debugging program designed to provide the user with a variety of debugging tools. Operating under one of INTERDATA 16-bit operating systems (BOSS, DOS and OS/16 MT2, OS AIDS accepts directives to provide cell/register manipulation and hexadecimal, decimal, character, floating point and assembly format. Additionally, OS AIDS provides the user with eight snapshot trace and breakpoints to provide a total of twenty-four sentinel points for execution checkpointing. The built-in interpretive processor allows the user to protect up to eight cells and registers. Dump formats (decimal, hexadecimal with character translation, binary, floating point, disassembly and loader format) are available individually, through directives, and may be specified under snapshot options. For documentation order manual No. 29-319.	\$ 55.
03-056—Mxy	OS Copy Utility This utility allows the user to copy files or volumes from one device to another for peripheral conversion, reproduction or data retention. Additionally, the program will verify, display and provide basic commands for writing file marks, positioning to file marks and re-winding. This program is designed for use with all operating systems.	\$ 25.
03-056—M95	OS Copy Utility User's Manual	\$ 5.
03-057—Mxy	OS Source Updater The OS Source Updater provides creation and maintenance capability for ASCII data files contained on magnetic tape. File control is maintained using named file techniques with the ability to duplicate, locate (search) list insert records, modify records and verify files by comparison. This program is used with 16 and 32 bit operating systems.	\$ 25.
03-057—M95	OS Source Update User's Manual	\$ 5.
03-062—Mxy	7/32 Stand Alone Debug This utility provides the capability to debug developmental programs without using a 32-bit operating system. Programs may be executed under control of breakpoints and facilities are provided for examination, modification and insertion of data into memory of registers. Controlled listings, core dumps, search and disassembly is provided.	\$ 30.
03-062—M95	7/32 Stand Alone Debug Program Description	\$ 5.
03-063—Mxy	OS EDIT This editor is designed for use with any INTERDATA operating system in an interactive or batch mode and is available in 16 or 32 bit formats. This program allows user creation and update of ASCII or binary files. Input and output may be any device with control exercised via the console teletypewriter/CRT or via batched input commands. Editing is performed at the line and character levels and includes string search and modification capability. For documentation order manual No. 29-373.	\$ 30.
03-064—Mxy	OS/32 Automatic Interactive Debugging System (OS/32 AIDS) This 32-bit operating system debug utility is a comprehensive debugging program designed to provide the user with a variety of debugging tools. The program accepts directives to provide cell and register manipulation in hexadecimal, decimal, character, floating point and assembly formats. Additionally, provides the user with eight snapshot trace and breakpoints to provide a total of twenty-four sentinel points for execution control. The built-in interactive processor allows the user to protect up to eight cells and registers. Dump formats (decimal, hexadecimal with character translation, binary, floating point, disassembly and loader format) are available individually through directives and may be specified under snapshot options. For documentation order manual No. 29-374.	\$ 30.
03-065—Mxy	OS/32 Library Loader This loader is used with 32 bit operating systems. Facilities are included to allow operator controlled object file creation, search, addition and duplication. Automatic lining is provided to allow loading all library programs for any specific requirement. For documentation order manual No. 29-376.	\$ 30.

Program Format Number Description	PROGRAM DESCRIPTION (Continued)	Base Price
03-067—Mxy	7/32 Relocating Loader This is a stand alone program that accepts input from paper tape or magnetic tape devices with complete error and display control. The loader provides ENTRY and EXTRN linkage operations and maintains forward reference chaining. Program load module identification labels are recognized and may be visibly logged. Absolute and relocatable 32-bit object programs are accepted. For documentation order manual No. 29-376.	\$ 30.
03-074—Mxy	OS/32 Direct Access Bootstrap Loader The OS/32 DAL loads selected operating system images from a direct access device. The loader scans the directory seeking a contiguous file whose name begins with the four alphanumeric 'OS32'. If the file's extension matches the OS selector previously entered in memory cell X'7E', the file is loaded and executed. For documentation order manual No. 29-376.	\$ 30.
03-098—Mxy	OS/16MT2 Direct Access Bootstrap Loader The OS/16 DAL loads selected Operating System images from a Direct Access Device. The Loader scans the directory seeking a contiguous file whose name begins with the four alphanumeric 'OS16'. If the file's extension matches the OS selector previously entered in memory cell X'7E', the file is loaded and executed. For documentation order manual No. 29-430	\$ 30.
04-023—Mxy	Bootstrap Generation Package Provides the capability to produce 16-bit self loading programs on paper tape, cassette and magnetic tape mediums.	\$ 30.
04-023-M99	Bootstrap Generation Documentation Package.	\$ 10.
06-024—Mxy	Relocating Loader This is a stand-alone program for a 16-bit processor that accepts input from paper tape or magnetic tape devices and logs noted errors on the processor display panel. Control is exercised from the display panel with the program providing relocation and forward reference chaining. Absolute or relocatable programs are accepted.	\$ 30.
06-025—Mxy	General Loader The General Loader is a stand-alone program for a 16-bit processor that accepts input from paper tape or magnetic tape devices and logs messages on the control console. Control is maintained by the loader with error flagging, ENTRY and EXTRN linking and and forward reference chaining. Absolute and relocatable programs are accepted. For documentation order manual No. 29-231.	\$ 30.
07-046—Mxy	OS Random Access Bootstrap Loader The Bulk Storage Bootstrap loads from the bulk storage device into main memory and starts the system at X'02D0'. This program is loaded by the 50-Sequence (AL X'CF', B X'80') with location X'78'-X'79' containing the Binary Input Device Number and Command byte location, and location X'7A' containing the bulk storage device number. This program is used with 16-bit operating systems other than OS/16MT2.	\$ 30.

MULTI MEDIA DIAGNOSTIC PACKAGES—MMD

The Multi Media Diagnostic Package is a complete diagnostic system on magnetic tape, cassette, or disc. This system provides a user with a replacement or supplement to the paper tape test programs provided with each piece of hardware.

To insure wide user utilization, the MMD Package is designed around a minimum system configuration. Program loading requires only an input device (magnetic tape, cassette or disc), processor, and display panel.

Two separate packages are available, one for 16 bit and one for 32 bit processors. Each package contains, the media, a list of all programs on the media, directions for use, and a paper tape disc boot loader. Each media contains the Multi Media Diagnostic Loader and the diagnostic programs as indicated in the list of individual test programs.

Although test program documentation is supplied with the original system hardware components, a documentation package is separately available to provide the user with the most up to date documentation and listings.

Additional copies of documentation or documentation for programs not supplied with the system hardware are available separately.

MINIMUM HARDWARE REQUIRED:

A 16-Bit processor with 23KB of memory or 32 Bit processor with 32KB of memory
Display Panel (Binary or Hex)

An Input device to load the programs from the magnetic media:

Cassette or

Mag Tape (800 or 1600 CPI, 9 Track) or

2.5MB or 10MB Disc with a Selector Channel

OPTIONAL OUTPUT DEVICES SUPPORTED BY THE LOADER

Teletype

CRT on Teletype Interface or CRT on PASLA

Line Printer

OPTIONAL BOOT LOADING DEVICES FOR DISC SYSTEM ONLY

Teletype or HSPTTR

SECTION V DOCUMENTATION

INTRODUCTION

This section lists documentation available for purchase from INTERDATA. All documentation pertains to active supported, standard INTERDATA products. INTERDATA generated is usually available of the shelf while vendor generated could have a lead time up to 150 days after receipt of order.

DISCOUNT POLICY

All documentation listed in this section is discountable when ordered in quantities of identical items. Discount rates apply only to individual documentation quantities, combining documents on a single order for discount level is not permitted. Documents shipped may not be returned for credit, however, damaged shipments will be replaced upon inspection and acceptance by INTERDATA.

DISCOUNT SCHEDULE

Number of Copies	Discount
1 — 5	0%
6 — 14	10%
15 — 29	16%
30 — 75	17%
75 +	21%

SECTION VII

HARDWARE, SOFTWARE, SYSTEMS ENGINEERING AND PROGRAM MANAGEMENT SERVICES

1. SYSTEMS ENGINEERING AND SOFTWARE SERVICES

SYSTEMS ENGINEERING SERVICES

For fulfilling customer requirements with respect to Software, Documentation and Equipment Engineering Services performed at Oceanport, New Jersey.

\$280/Day
\$1,400/Week
\$6,160/Month

The above prices are based upon a regular work day; material, travel and subsistence as required is additional and billable as incurred on a cost reimbursement basis.

OS/32 MT OPERATING SYSTEM INSTALLATION

The first copy of OS/32 MT includes installation at customer site. Installation is composed of system generation on site or at an INTERDATA facility and three days of on-site support for installation demonstration of OS/32 MT. Installation applies to standard INTERDATA supported products only. Assistance for customer written system or application programs is available at standard rates. Requests of this type should be referred to your local INTERDATA Sales Office. Included in the price of installation is travel and living expenses.

S90-902

SOFTWARE SUBSCRIPTION SERVICE

This service provides an INTERDATA user with regular software bulletins describing new INTERDATA software, software defects and the patches or alternatives associated with such defects. In addition, other valuable information will be available to subscribers such as functional specifications and other detailed information which will aid the user. Subscribers to the service will also be able to purchase revisions to previously purchased standard software packages at reduced rates.

S90-901

HARDWARE SUBSCRIPTION SERVICE

This service entitles an INTERDATA user to receive Product Improvement Notices (PINs) which contain change information to insure safe error free operation of their system. In addition to change information the subscriber will receive general information bulletins, preventive maintenance procedures and other information helpful to the operation and maintenance effort.

M49-206

16 BIT PROCESSOR COMPUTER TIME

Rental of 16 bit processor time is available by the hour from the INTERDATA Computer Centers located in key cities throughout the United States. Computer Center operators are optionally available for 1st or 2nd shift operation. Contact your local sales engineer for additional information as to local site facilities and available equipment.

S90-903

32 BIT PROCESSOR COMPUTER TIME

Rental of 32 bit processor time is available by the hour from the INTERDATA Computer Centers located in key cities throughout the United States. Computer Center operators are optionally available for the 1st or 2nd shift operation. Contact your local sales engineer for additional information as to local site facilities and available equipment.

S90-904

OS/16MT OPERATING SYSTEM INSTALLATION

Installation is composed of system generation on-site or at an INTERDATA facility (at INTERDATA's option) and three days of on-site support for installation demonstration of OS/16MT2. Installation applies to standard INTERDATA supported products only. Travel and Living expenses are included in the price.

S90-905

2. HARDWARE MAINTENANCE TRAINING

MODEL 70 MAINTENANCE COURSE (M70)

This three week course is designed to familiarize personnel with basic repair and maintenance concepts of the Model 70. Circuit board analysis, installation and configuration rules, I/O theory, ROM theory and instruction set among other details are taught.

Students attending this course should have previous programmable digital computer experience with a familiarity of INTERDATA programming techniques and logic symbology.

M49-300

MODEL 80/85 MAINTENANCE COURSE (M80/85)

This three week course is designed to familiarize maintenance personnel with the inherent characteristics of the Model 80/85. A basic understanding of MOS memory, control store, circuit board analysis, interpretation of diagnostic programs, I/O techniques among other details will be taught.

Students attending this course should have previous programmable digital computer experience with a familiarity of INTERDATA programming techniques and logic symbology.

M49-301

COMMUNICATION INTERFACES (COMM INT)

This one week course is designed to familiarize maintenance personnel with basic characteristics of the INTERDATA communications modules. Emphasis is placed on the circuit analysis of PALS, synchronous and asynchronous data set adapters and other communications related modules.

Students attending this course should be familiar with communications and the INTERDATA input/output scheme.

M49-303

MODEL 6/16 MAINTENANCE COURSE (M6/16)

This two week course is designed to familiarize maintenance personnel with enough information to recognize, diagnose, isolate and repair hardware failures of the Model 6/16 processor using current maintenance manuals, diagnostics and troubleshooting aids and procedures.

M49-314

MODEL 7/16 BASIC MAINTENANCE COURSE (M7/16)

This two week course is designed to familiarize maintenance personnel with repair and maintenance concepts of the Model 7/16. Circuit board analysis, uses of the test set, processor operation, functional schematics and hex display panel will be discussed.

Students attending this course should have previous experience on a programmable digital computer.

M49-304

ON-SITE EDUCATIONAL SERVICE (OSS)

Arrangements can be made to have a standard or special course conducted at a customer's facility. The customer must provide a classroom and all necessary laboratory equipment.

M49-307 On-Site Standard Course
M49-308 On-Site Special Course

Includes applicable documentation for up to ten (10) students. Additional charges of \$200/student are applied for all students above ten (10).

For courses of less than one week (5 days) in duration, the charge is \$500/day with a 3 day minimum, plus an additional charge for preparation when applicable.

See the INTERDATA Training Manual for further information.

MODEL 7/16 HSA LU MAINTENANCE COURSE (M7/16H)

This three week course is designed to familiarize maintenance personnel with basic repair and maintenance concepts of the Model 7/16 with High Speed Arithmetic Logic Unit. Installation, configurations, I/O theory, ROM theory, instruction set and circuit board analysis are discussed.

2. HARDWARE MAINTENANCE TRAINING (CONTINUED)

Students attending this course should have previous maintenance experience on a programmable digital computer and be familiar with INTERDATA programming techniques.

M49-309

MODEL 7/32 MAINTENANCE COURSE (M7/32)

This four week course is designed to familiarize maintenance personnel with the repair concepts of extended memory machines. Topics include 7/32 instruction set, circuit board analysis, interpretation and diagnostic routines and memory management techniques.

Students attending this course should have previous maintenance experience on a programmable digital computer.

M49-305

MODEL 8/32 MAINTENANCE COURSE (M8/32)

This four week course is designed to familiarize maintenance personnel with the repair concepts of extended memory machines. Topics include 8/32 instruction set, circuit board analysis, interpretation and diagnostic routines and memory management techniques.

Students attending this course should have previous maintenance experience on a programmable computer.

M49-313

MULTIPLEXOR BUS INTERFACES (MUX BUS)

This one week course includes basic multiplexor bus characteristics and standard peripheral interfaces and devices to include, TTY, Card Reader, Line Printer and High Speed Paper Tape, CRT, Universal Clock, Loader Storage Unit, Mux Bus Switch and Mux Bus Buffer.

Students attending this course should be familiar with the INTERDATA I/O scheme.

M49-311

MAGNETIC TAPE INTERFACES (MAG TAPE)

This one week course is designed to familiarize maintenance personnel with the characteristics of the INTERDATA magnetic tape interfaces. Basic PM and adjustment theory of the cassette, 800 and 1600 BPI tape drives will be taught.

Students attending this course should be familiar with the INTERDATA processor I/O structure.

M49-312

DISC INTERFACES (DISC INT)

This one week course includes basic selector channel characteristics and a discussion of the INTERDATA supported disc devices and interfaces. Test Programs and preventive maintenance procedures are also discussed.

Students attending this course should be familiar with general disc characteristics and the INTERDATA I/O scheme.

M49-310

16 BIT SYSTEMS ERROR ANALYSIS COURSE (16 BIT ERROR)

This one week course is designed to familiarize the student with basic systems configurations allowing him to approach a problem from a system rather than a processor or peripheral point of view. Operating system I/O scheme, interpretation of error messages and systematic troubleshooting procedures will be taught.

Students attending this class should be familiar with INTERDATA's OS/16 MT I/O structure and multiplexor bus theory.

M49-315

32 BIT SYSTEMS ERROR ANALYSIS COURSE (32 BIT ERROR)

This one week course is designed to familiarize the student with basic systems configurations allowing him to approach a problem from a system rather than a processor or peripheral point of view. Operating system I/O scheme, interpretation of error messages and systematic troubleshooting procedures will be taught.

Students attending this class should be familiar with INTERDATA's OS/16 MT I/O structure and multiplexor bus theory.

M49-316

CAROUSEL MAINTENANCE COURSE (CAROUSEL)

This one week course is designed to familiarize maintenance personnel with the use, block diagrams, logical theory of operation and troubleshooting techniques of the Carousel Terminal.

Students should be familiar with the INTERDATA multiplexor bus characteristics along with experience in maintaining electro-mechanical devices.

M49-317

3. SOFTWARE EDUCATION

INTRODUCTION TO ASSEMBLY LANGUAGE (INTRO)

This one week course is designed for the student with no computer or assembly language background. It covers basic fundamentals of computer concepts and assembly language programming.

No prerequisites.

S90-967

16 BIT PROGRAMMING COURSE (P16)

This one week course provides the student with the basic skills to write assembly language programs for INTERDATA 16-bit series processors. The emphasis is upon generation, execution, editing and modification of source codes and object programs using standard stand alone INTERDATA utilities.

The students should be an experienced assembly language programmer, and should be familiar with assemblers, loaders, editors and debugging routines.

S90-950

16 BIT OPERATING SYSTEMS (BOSS, DOS) (16OS)

This one week course covers the conceptual operation of INTERDATA's Basic Operating System (BOSS) and Disc Operating System (DOS). The emphasis is upon generation, execution, editing, and debugging of programs using standard INTERDATA operating system utilities.

The student should be an experienced assembly language programmer, and should be familiar with assemblies, loaders, editors and debugging routines. INTERDATA's 16 Bit Programming Course is recommended as a prerequisite.

S90-952

PROGRAMMING FOR 32 BIT PROCESSORS (P32)

This one week course will prepare the student to write assembly language programs for the INTERDATA 32-bit series processors using both the instruction set and the Common Assembly Language (CAL) syntax.

The student must be an experienced assembly language programmer and be familiar with the general operation and purpose of assemblers and loaders.

S90-956

OS/16 MT2 USER COURSE (OS/16MT2U)

This one week course covers the conceptual operation of OS/16 MT within the multi-task environment. The student will generate and run a multi-task system as part of the course.

Students must be familiar with the basic concepts of operating system programming and the use of INTERDATA's Disc Operating System (DOS) or Basic Operating System (BOSS).

S90-953

3. SOFTWARE EDUCATION (CONTINUED)

OS/16 MT2 INTERNALS (OS/16MT21)

This one week course covers the operation of the OS/16 MT system modules with respect to program flow and functions. The student will modify the course form of a particular module, and then integrate the modified modules into a working system.

Students should be familiar with INTERDATA assembly level programming and possess a working knowledge of operating system programming.

S90-954

OS/32 MT USER (OS/32MTU)

This one week course prepares the student to generate tasks to run in a real time, multi-task environment. As part of the course the student will prepare an OS/32 MT System geared to his particular needs.

The student should be familiar with the basic concepts of operating system programming.

S90-958

OS/32 MT INTERNALS (OS/32 MTI)

This one week course covers the operation of the OS/32 MT system modules with respect to program flow and functions. The student will modify the course form of a particular module, and then integrate the module, and then integrate the modified modules into a working systems.

Students should be familiar with Interdata Assembly Level Programming and possess a working knowledge of Operating System Programming.

S90-959

OS/16 MT1/REAL TIME OPERATING SYSTEM (OS/16 MT1/RTOS)

This one week course prepares the student to generate FORTRAN or assembler level tasks to run in real time under a multi-task Operating System. The conceptual operation of a multi-task environment is covered as is the preparation and generation of a system module.

The student should be familiar with the basic concepts of Operating Systems programming, and with the use of INTERDATA Disc Operating System (DOS) or Basic Operating System (BOSS) Software. A working knowledge of fortran IV or INTERDATA assembler language is required.

S90-966

ITAM 16

This three day course will familiarize the student with the design and structure of Interdata's telecommunications access method. Basic communications theory will also be taught.

The student should be an experienced Assembly Level Programmer.

S90-968

ITAM 32

This three day course will familiarize the student with the design and structure of Interdata's telecommunications access method. Basic communications theory will also be taught.

S90-969

ON SITE TRAINING COURSES

Arrangements can be made to have a standard or special course conducted at a customer's facility. The customer must provide a classroom and all necessary laboratory equipment.

S90-962 On-Site Standard Courses
S90-963 On-Site Special Course

Includes applicable documentation for up to ten students, additional charges of \$200 per student are applied.

Courses less than one week (5 days) the charge is \$500 per day with a 3 day minimum plus an additional charge for preparation when applicable.

SECTION VIII CUSTOMER SERVICE SUPPORT

The Customer Service Department is organized to provide comprehensive maintenance service geared to the needs of the OEM User. Our field service force is comprised of carefully selected, experienced, well trained individuals backed up by a group of service specialists located at our Oceanport, N.J. facility.

Customer engineers are located in major cities throughout the world to provide service on a local level. Each Service Center is stocked with spare parts, tools and special test equipment to facilitate rapid repair.

FIELD INSTALLATION FIXED PRICE

The charges for field installation of a system or expansion shall be the sum of the installation prices plus a one-time travel charge from the nearest INTERDATA service office. A minimum installation charge of \$200 plus the travel charge is applicable. Installation consists of functional, operational testing and system performance as demonstrated by applicable INTERDATA test programs. This service is available for items purchased directly from INTERDATA and must be ordered prior to shipment of the equipment.

Travel Charges are as follows:

Distance from service Center	Travel Charge
0— 20 Miles	No Charge
21—100 Miles	\$ 50
101—300 Miles	\$150
301—500 Miles	\$250

FIELD SERVICE CENTERS

WARRANTY

Total Service For the OEM Customer

INTERDATA's purchase agreements are structured to make available a comprehensive package of services to assure efficient, successful system implementation.

For the hardware, the unique INTERDATA Full Service Warranty provides a 90 day on-site parts and labor warranty for the greater of \$300 or 3% of the list price of the system. For the software, a one year subscription to the comprehensive INTERDATA Software Subscription Service is included with the purchase of all standard operating systems.

The full Service Warranty and the Software Subscription Service are also available as an option on additional system purchased under the INTERDATA OEM Agreement.

FULL SERVICE WARRANTY

Buyer receives installation and 90 days on site service warranty, including replacement parts, for the system as supplied by INTERDATA and commencing on the date of installation will be provided at the buyer's designated shipping point within the Continental United States and will consist of functional operations testing and systems performance as demonstrated by applicable INTERDATA test programs. Field testing of interfaces and controllers purchased without associated peripheral device will not be done. All remedial maintenance required during the 90 day period to correct defects in material and workmanship will be provided at no additional charge for installation sites within 200 miles of the nearest INTERDATA Service Center. Buyer will reimburse INTERDATA for all travel and subsistence expenses for installation sites that are beyond 200 miles. Service is provided during the normal 40 hour business week. When purchased as an option the charge for Full Service is the greater of \$300 or 3% of the system's list price and must be ordered prior to delivery of the system M46-910.

FACTORY WARRANTY

The responsibilities of INTERDATA under this warranty are at its option to repair or replace, without extra charge, any defective component part manufactured or assembled by INTERDATA. Obligation under this warranty shall not arise until buyer returns the defective product to the INTERDATA plant in Oceanport, New Jersey with all shipping and insurance costs the responsibility of the buyer.

THE PRECEDING WARRANTIES DO NOT EXTEND AND SHALL NOT APPLY TO:

1. Products which have been repaired by personnel other than those employed by INTERDATA unless Buyer has properly maintained and repaired the products in accordance with the procedures previously approved in writing by INTERDATA, or,
2. Products which have been altered by personnel other than those employed by INTERDATA, unless alterations have been previously approved in writing by INTERDATA and have been properly performed in accordance with such approval; or,
3. Products which have been subject to misuse, neglect, accident, or improper installation.

THE ABOVE WARRANTIES ARE VOID:

For any Interdata Equipment to which has been added any foreign equipment, either residing in an Interdata chassis or connecting to the Interdata Equipment other than via an Interdata Supplied Interface Device.

PURCHASE AGREEMENT PROVISIONS

Table 1

Agreement		Full Service	Factory Warranty	Training	Documentation
Dollar Volume	Initial System	Included	NA	2 Man Weeks	Standard
	Additional Systems	Included	NA	2 Man Weeks Per System	Standard
	Expansions	Note 1	60 Days	None	Standard
OEM Purchase	Initial System	Mandatory 1st Unit Each Model	NA	2 Man Weeks	All Standard
	Additional Systems	Optional	30/30	None	All Maintenance
	Expansions	Note 1	30 Days	None	All Maintenance

NOTE 1: Full Service option is not available for expansion orders. Installation service at the fixed prices applicable to the expansion being installed.

A number of distinct type of maintenance service are offered after the warranty expires. INTERDATA customers can choose the type of service plan which best meets their specific maintenance needs. Three types of service contracts are available and described briefly below.

CONTRACT MAINTENANCE

Contract Maintenance is the recommended form of service for most INTERDATA systems. It affords the user a means of obtaining maximum effective system use at reasonable and predicted rates. For a fixed monthly charge, a Contract Maintenance policy provides scheduled PM visits, all emergency repair service, replacement parts, and travel expenses. The monthly charge is derived from the system configuration, scheduled operational use and the number of hours per day that coverage is in effect. Contract Maintenance Service are available for 1, 2, or 3 shift operation, Monday through Friday, Additional coverage for weekends will be quoted on an as available basis. Minimum rates for contract coverage are established by the distance from the nearest INTERDATA Service Office.

RESIDENT MAINTENANCE

Resident Maintenance is a full time, on-site approach. Resident Maintenance normally appeals to customers with large, complex systems with high rates of usage or where the system application dictates on-site coverage. With a Resident Contract, INTERDATA provides an on-site customer engineer with all necessary tools and test equipment for maintenance of INTERDATA manufactured equipment.

DEPOT REPAIR SERVICE OPTIONS

1. Depot Contract—Defective items are returned to the nearest depot for repair. A fixed charge covers all parts and labor.
2. Fixed Price Board Repair and Exchange—INTERDATA provides a fixed price board repair service for current products as well as board exchange program. Consult your local service office or depot for rates and availability.
3. Hourly Rates—Repairs at hourly rates plus parts as applicable.

FIXED PRICE DEPOT REPAIR AND EXCHANGE SERVICE

Description

Fixed Price depot repair and exchange service provides the user with the ability to rapidly return his system to operational status or obtain repairs at predetermined rates. This service eliminates lengthy quotation procedure and open or "will advise" purchase orders.

Provisions

Standard current products, manufactured by Interdata, will be repaired for the fixed price then in effect, or, at the customer's option, an exchange unit will be provided for a fixed fee plus the repair cost. When exchange items are requested they will, based upon availability, be shipped the same day or the next business day. Items being returned under exchange terms must be received at the appropriate depot within 10 days of the replacement date or additional charges per item will be applicable.

A thirty (30) day depot warranty is extended for all items repaired or exchanged, provided that failures are not a result of misuse or external sources. All shipping costs are the responsibility of the buyer. Collect shipments will not be accepted.

Exclusions

Items which have been subjected to misuse, abuse, modification, or exhibit catastrophic failure characteristics will not be accepted under the terms of fixed price repair and exchange service. Additionally, those items classified as obsolete (not in the current price book) do not qualify. Notification after inspection with a quotation and/or recommendation will be provided for those items that do not qualify for fixed price repair. A \$50 per item handling charge is applied to unqualified items and to items which do not exhibit any failures when received.

BACK-UP MAINTENANCE

Backup Maintenance is an hourly approach to service on a per-request basis. This approach is of particular interest to customers who have qualified service personnel to perform all routine maintenance. No Contract is required, only a customer purchase order at the time the request for service is initiated. Backup Maintenance service is provided on a first-come first-serve basis and, where conflict exists, Contract Maintenance service calls are given priority.

Hardware Installation Service

Field installation of new systems or expansions purchased from Interdata will be performed by Interdata at the fixed price field installation rates specified in the current Hardware Price Book. Consult your local Customer Service office for price and scheduling.

Depot Repair Services

Interdata has established five service depots: Los Angeles, Dallas, Chicago, Englewood Cliffs, and Oceanport, N.J. Each is capable of performing repairs both at the circuit board level and the systems level. Depot repair services are available to all Interdata customers at fixed price repair rates for current products and at time and materials rates for non-current products. Consult your local Service Depot for details.
