

Concept Index

# reader macros	521	characters	204
%%kbd fields	206	circular list	86
60ths of a second	777	cleanup handler	82
accessor function	372	closure	13, 250
active process	682	combined method	413, 433
advice to functions	742	common lisp	7
alist	102	Common Lisp syntax	507, 516
allocation of storage	123	compiled code	752
alphabetic case	212	compiler	301
alterant macro	387	compiler warnings	308
applicable function	13	complexnum	135
area	88, 296	condition handlers	700
argument checking	709	condition instances	698
array	12, 162	condition names	698
array initialization	168	conditional	62
array leader	166, 170	conditionalization, read-time	525
array-elements		conditionalizing clause(s)	
loop iteration path	366	in loop	359
arrest reason	682	conditions	698
association list	102, 110	cons	11, 86
atom	5, 11	constructor	373, 385
attribute	113	control structure	62
attribute list, file	594	coroutine	250, 256
autoexporting packages	642		
		daemon methods	413
backquote	325	data type	11
balance directories	603	dates and times	776
band	804	debugger	726
base-flavor	431	declaration	51
basic definition	224, 244	default (pathname)	554
bignum	135	defining packages	652
binding	25	definition	9, 223
bit array	163	defmacro	322
bits (of a character)	205	defstruct	372
blocks	114	dependency	664
booting	804	device (pathname)	547
break loop	795	directory (of files)	598
byte	155	directory (pathname)	547
byte specifiers	155	disembodied property list	114
		dispatch macro character	540
canonical type (of a pathname)	551	displaced array	166, 168
capabilities	609	displacing macros	342
car	86	dot, in symbols	333
case conversion	212	dotted list	86, 520
catch	80	dotted pair	5
cdr	86	dribble file	802
cell	267	dynamic non-local exit	80
character code	205	dynamic scope	26
character code values	208		
character object	10, 203	elements (of a list)	86
character set	205	encapsulation	224, 244
		entity	13, 255
		eq versus equal	69
		equal versus =	69

error system	698	I/O stream	459
escape characters	516	ignored arguments	309
escaping.	506	importation of symbols	642
eval-when.	304	index offset	167, 169
evaluation	24	indicator	113
exit.	62	indirect array	167, 168
exportation of symbols	642	inheritance between packages	641
expression input	530	init file	560
expression output	527	initial function	256
external symbols	642	initialization	772
external value cell	251	input and output	448
		input to the compiler	303
fascism	607	instance	401
fasdump.	317	interchange form of pathname components.	549
FFI	10, 232	internal symbols	642
file	580	internal value cell.	251
file attribute list	594	interned-symbols	
file directory	598	loop iteration path	365
file properties	599	interning	644
file servers	607	invisible pointers	272
filename.	545	iteration	62, 70, 350
filename completion	602	ITS pathnames.	568
fill pointer	162, 166		
fish.	65	keyboard character	206
fixnum	135	keyword parameters.	39
flavor	401	kitty	68
float	135	kitty, yu-shiang	109, 489
flow of control	62		
font (of a character)	205	lambda list	38
formatted output	483	lambda-list keywords	43
formatting lisp code	528	lexical closure	28
forwarding pointer.	272	lexical scope.	26
free variable	27	lexpr.	238
function.	13, 223	Lisp machine pathnames	571
function cell	130	lisp top level.	795
function entry frame	232	list	86
function renaming.	249	listen loop.	795
function spec.	223	LMFILE pathnames	572
		loading	591
garbage collector	797	local nick names of packages.	651
general array	163	Local-File pathnames	571
generic pathname	561	locative.	14, 267
generic sequence functions	188	lock	687
global binding	25	logical pathnames.	572
go to	78	loop	350
grinding.	528	lower case letter	212
grouped array	389		
		macro characters	539
handling errors	698	macro defining macros.	372
hash table	116, 121	macro-defining macros	322
hash-elements		macros	320
loop iteration path	365	mapping	84
home directory	560	MAR	750
host (pathname).	547	merge (pathname)	546, 554
host objects	576	message	401
host table	810	method.	401
		method combination	433

method types	434	prog tag	78
microseconds	778	property list	9, 113
mixin	431	QFASI files	301
modifier bits (of a character)	205	querying the user	768
module	662, 671	quote	48
Multics pathnames	571	rank of an array	162
multiple accumulations		ratio	135
in loop	357	raw pathname components	549
multiple values	55	read macro characters	539
multiprocessing	682	read-eval-print loop	795
name (pathname)	547	reader	516
name spaces	636	reading	530
named structure	390	readtable	535
named-subst	230	record (structure)	372
names (of packages)	649	recursion	62
naming convention	11	regular pdl	256
nicknames (of packages)	649	rename-within	249
non-local exit	62, 75, 80	required parameters	39
non-terminating macro character	540	resource	123
nonlocal proceed types	723	rest parameters	39
number	11, 135	resume handlers	723
numeric array	163	resumer	257
object	401	returning multiple values	55
optimizer, compiler	313	rubout handler	500
optional parameters	39	run reason	682
order of evaluation in iteration clauses		s-expression	5
in loop	353	scheduler	683
package	636	scope of binding	25
package declarations	652	scream	201
package prefixes	638, 651	sequential vs parallel binding and initialization	
paper tape punch	215	in loop	352
parameters	39	self	35
paranoia	608	sets	107
parse (pathname)	546	shadowing of bindings	25
partition	804	shadowing of symbols	647
passwords	607	sharp sign reader macros	521
patch	672	short float	135
pathname	545	signal names	713
period, in symbols	333	signaling conditions	708
plane	185	simple array	162
plist	113	simple process	695
positional parameters	39	single-character symbol	538
predicate	11	site options	810
presetting stack groups	256	slot	374
pretty-printing	528	sorting	200
primary method	434	special character	211
print name	9, 132	special forms	233
printed representation	506	special pdl	29, 256
printer	506	special variable	26, 305
printing	527	specialized array	163
priority (of a process)	683	stack group	165, 256
proceed types	717	stack lists	112
process	682	statement	78
process wait function	682	static non-local exit	75

status, of a patchable system	679	type specifiers	14
stepping through evaluation	746	types of arrays	163
storage allocation	123		
stream	448, 459	unbinding	25
string	12, 163, 203	unbound variable	26
structured pathname components	549	uninterned symbol	133
structures	372	universal time	776
subprimitive	270	Unix pathnames	570
subscript	162	unreleased patches	677
subst	230, 329	unspecific pathname components	548
substitutable function	329	untyped methods	434
substitution	97	unwind protection	82
supplied-p variable	42	unwinding a stack	82
symbol	9, 11, 129	upper case letter	212
system	660		
system maintenance	672	value cell	29, 129
		variable bindings	
tag	78, 80	in loop	354
tail recursion	55	vector	162
Tenex pathnames	570	version (pathname)	547
terminating macro character	540	very mangled software	570
terminating the iteration		VMS pathnames	570
in loop	358	void binding	26
throw	80		
times and dates	776	wait	682
TOPS-20 pathnames	569	wait function	683
total size of an array	162	warnings from the compiler	308
tracing function execution	737	wildcards (in pathnames)	563
traditional syntax	507, 516		
transformation	663	yes-or-no	768
tree	86		
Twenex pathnames	569	'&' keywords	43
type (pathname)	547
